## Chapter 8 Rotational Motion Simulated Gravity and Frames of Reference

Suzie Spacewalker and Bob Biker are in outer space. Bob experiences Earth-normal gravity in a rotating habitat, where centripetal force on his feet provides a normal support force that feels like weight. Suzie hovers outside in a weightless condition, motionless relative to the stars and the center of the habitat.

1. Suzie sees Bob rotating clockwise in a circular path at a linear speed of 30 km/h. Suzie and Bob are facing each other, and from Bob's point of view, he is at rest and he sees Suzie moving [clockwise] [counterclockwise].

Bob at rest on the floor  
Suzie hovering in space

2. The rotating habitat seems like home to Bob—until he rides his bicycle. When he rides in the opposite direction as the habitat rotates, Suzie sees him moving [faster] [slower].

Bob rides counterclockwise

3. As Bob's bicycle speedometer reading increases, his rotational speed [decreases] [remains unchanged] [increases] and the normal force that feels like weight [decreases] [remains unchanged] [increases]. So friction between the tires and the floor [decreases] [remains unchanged] [increases].
4. When Bob nevertheless gets his speed up to 30 km/h, as indicated on his bicycle speedometer, Suzie sees him [moving at 30 km/h] [motionless] [moving at 60 km/h].
