

PML FOR STARTERS AND BEGINNERS

DISCLAIMER

This tutorial is for those who are using AVEVA PDMS in their day-by-day work and wants to know the system deeper and automate work and make the system do whatever they want.
This is for the starters who don't know about programming at all and for the beginners who can already do some simple tasks. Those who are experienced PML gurus probably also find something useful.
And for sure this is for any PDMS administrators who must have PML knowledge for better doing their duties. Enjoy!
Any questions please send – pdmsmagic@gmail.com (I'll try to reply everyone but apologies beforehand for any delay ☹).

This tutorial should not be used as a training guide or as a training material. It is only to give a basic explanation of what is PML, simple constructions etc. User should be trained on a PML training course provided by AVEVA to get full knowledge needed on starting to make programs.

This tutorial is explaining only the concept and basic of PML but will not be explaining how to create own forms and functions and complex methods or how to set some environments. This will be described in another tutorial.

INTRODUCTION

PML (Programmable Macro Language) so called macro-language of PDMS is a PDMS built-in interpreted programming language which:

- Does most of the actions user run thru PDMS interface – it's a PML supplied with installation of PDMS (For example when user press some button then it is PML code executed and do something)
- Used in any user-defined macros or functions that could be developed by ANY user to create for example some function that not exist in standard supply but needed for user. (For example user can create its own GUI – Graphical User Interface like forms, special functions etc)
- Could automate nearly every action, which is repeated by user from day to day and takes much time to perform – (we will call it "Quick Macro" and use QM abbreviation further in this tutorial)

The main manual describing the PML called *Software Customisation Guide* for PML basics and *Software Customisation Reference Manual* for PML2 objects and their members and methods. Both manuals supplied with the system

In general every user can learn PML as far as there is no need to have any deep programming skills but just understanding of:

- PDMS hierarchy concept
- PDMS's items type
- PDMS's items attribute dependencies and references
- PDMS terminology and most commonly used words and terms (see Appendix A)

User who wants to know and use PML should have a basic knowledge of PDMS and be familiar with described points. For example, user should not be scared of word EQUI or ZONE level or Attributes or P-
