Biostatistical Design and Analysis Using R Dr Murray Logan, 2011-09-20 R the statistical and graphical environment is rapidly emerging as an important set of teaching and research tools for biologists This book draws upon the popularity and free availability of R to couple the theory and practice of biostatistics into a single treatment so as to provide a textbook for biologists learning statistics R or both An abridged description of biostatistical principles and analysis sequence keys are combined together with worked examples of the practical use of R into a complete practical guide to designing and analyzing real biological research Topics covered include simple hypothesis testing graphing exploratory data analysis and graphical summaries regression linear multi and non linear simple and complex ANOVA and ANCOVA designs including nested factorial blocking split plot and repeated measures frequency analysis and generalized linear models Linear mixed effects modeling is also incorporated extensively throughout as an alternative to traditional modeling techniques The book is accompanied by a companion website www.wiley.com/go/logan_r with an extensive set of resources comprising all R scripts and data sets used in the book additional worked examples the biology package and other instructional materials and links

Mallon, 2016-06-08 Antelopes constitute a fundamental part of ecosystems throughout Africa and Asia where they act as habitat architects dispersers of seeds and prey for large carnivores The fascination they hold in the human mind is evident from prehistoric rock paintings and ancient Egyptian art to today's wildlife documentaries and popularity in zoos In recent years however the spectacular herds of the past have been decimated or extirpated over wide areas in the wilds and urgent conservation action is needed to preserve this world heritage for generations to come As the first book dedicated to antelope conservation this volume sets out to diagnose the causes of the drastic declines in antelope biodiversity and on this basis identify the most effective points of action In doing so the book covers central issues in the current conservation debate especially related to the management of overexploitation habitat fragmentation disease transmission

climate change populations genetics and reintroductions The contributions are authored by world leading experts in the field and the book is a useful resource to conservation scientists and practitioners researchers and students in related disciplines as well as interested lay people *Molecular Basis of Medical Cell Biology* Gerald M. Fuller,Dennis Shields,1998 The Physics of Emotion, Love and Intimate Connection Dr I Pearson,2025-08-10 I explore the hidden physical mechanisms behind our most human experiences emotion bonding intimacy and the feeling of connection with others Drawing on Stein Theory this book shows how real physics processes work together to create conscious emotional states Love trust and group belonging are revealed not as abstract feelings but as structured events in matter uniting brain body and environment into a single moment of awareness I cover the physics of proximity kissing long term bonding grief empathy group emotion culture and even spiritual experience all grounded in hard science without metaphysics or psychic claims I explain how subtle physical biasing between nearby minds can influence mood and timing why rituals and shared activities feel powerful and how intimacy leaves lasting structural imprints in both memory and tissue Study Guide Essential Biology with Physiology Edward J. The Reception of Darwinism in the Iberian World T.F Glick, Miguel Angel Puig-Samper, R. Ruiz, 2001-10-31 I Twenty five years ago at the Conference on the Comparative Reception of Darwinism held at the University of Texas in 1972 only two countries of the Iberian world Spain and Mexico were represented At the time it was apparent that the topic had attracted interest only as regarded the mainstream science countries of Western Europe plus the United States The Eurocentric bias of professional history of science was a fact The sea change that subsequently occurred in the historiography of science makes 1972 appear something like the antediluvian era Still we would like to think that that meeting was prescient in looking beyond the mainstream science countries as then perceived in order to test the variation that ideas undergo as they pass from center to periphery One thing that the comparative study of the reception of ideas makes abundantly clear however is the weakness of the center periphery dichotomy from the perspective of the diffusion of scientific ideas Catholics in mainstream countries for example did not handle evolution much better than did their correigionaries on the fringes Conversely Darwinians in Latin America were frequently better placed to advance Darwin s ideas in a social and political sense than were their fellow evolutionists on the Continent The Texas meeting was also a marker in the comparative reception of scientific ideas Darwinism aside Although by 1972 scientific institutions had been studied comparatively there was no antecedent for the comparative history of scientific ideas
