LAWS, LANGUAGE and LIFE Howard Hunt Pattee, Joanna Rączaszek-Leonardi, 2012-12-09 Howard Pattee is a physicist who for many years has taken his own path in studying the physics of symbols which is now a foundation for biosemiotics By extending von Neumann's logical requirements for self replication to the physical requirements of symbolic instruction at the molecular level he concludes that a form of quantum measurement is necessary for life He explains why all non dynamic symbolic and informational controls act as special allosteric constraints on dynamical systems Pattee also points out that symbols do not exist in isolation but in coordinated symbol systems we call languages Such insights turn out to be necessary to situate biosemiotics as an objective scientific endeavor By proposing a way to relate quiescent symbolic constraints to dynamics Pattee's work builds a bridge between physical biological and psychological models that are based on dynamical systems theory Pattee's work awakes new interest in cognitive scientists where his recognition of the necessary separation the epistemic cut between the subject and object provides a basis for a complementary third way of relating the purely symbolic computational models of cognition and the purely dynamic non representational models This selection of Pattee's papers also addresses several other fields including hierarchy theory artificial life self organization complexity theory and the complementary epistemologies of the physical and biological sciences
