Genetics in the Madhouse

Theodore M. Porter, 2018-06-05 The untold story of how hereditary data in mental hospitals gave rise to the science of human heredity In the early 1800s a century before there was any concept of the gene physicians in insane asylums began to record causes of madness in their admission books Almost from the beginning they pointed to heredity as the most important of these causes As doctors and state officials steadily lost faith in the capacity of asylum care to stem the terrible increase of insanity they began emphasizing the need to curb the reproduction of the insane They became obsessed with identifying weak or tainted families and anticipating the outcomes of their marriages Genetics in the Madhouse is the untold story of how the collection and sorting of hereditary data in mental hospitals schools for feeble minded children and prisons gave rise to a new science of human heredity In this compelling book Theodore Porter draws on untapped archival evidence from across Europe and North America to bring to light the hidden history behind modern genetics He looks at the institutional use of pedigree charts censuses of mental illness medical social surveys and other data techniques innovative quantitative practices that were worked out in the madhouse long before the manipulation of DNA became possible in the lab Porter argues that asylum doctors developed many of the ideologies and methods of what would come to be known as eugenics and deepens our appreciation of the moral issues at stake in data work conducted on the border of subjectivity and science A bold rethinking of asylum work Genetics in the Madhouse shows how heredity was a human science as well as a medical and biological one

I Love Jesus & I Accept Evolution

Denis O. Lamoureux, 2009-03-04 In this thought provoking book born again Christian Denis O Lamoureux argues that the God of the Bible created the universe and life through evolution an ordained sustained and design reflecting natural process In other words evolution is not the result of blind chance and our creation is not a mistake Lamoureux challenges the popular assumption that God disclosed scientific facts in the opening chapters of Scripture thousands of years before their discovery by modern science He contends that in the same way the Lord meets us wherever we happen to be in our lives the Holy Spirit came down to the level of the inspired biblical writers and used their ancient understanding of origins in order to reveal inerrant life changing Messages of Faith Lamoureux also shares his personal story and struggle in coming to terms with evolution and Christianity

Genes and Cancer

Guy-Joseph Lemamy, 2019-09-11 Cancer is a malignant tumor caused

by DNA damage which leads to uncontrolled cell growth Tumor progression is locally favored by the mitogenic effects of hormones or growth factors which stimulate the tumor's growth or the activation of vascular endothelial growth factor receptor which induces angiogenesis and leads to metastasis About 300 out of 25 000 genes that set up the human genome are involved in cancer pathology These genes are divided into three groups oncogenes tumor suppressor genes and DNA repair genes Activated oncogenes promote the development of cancer whereas the tumor suppressor and DNA repair genes have a protective role by respectively inhibiting cell cycle progression and inducing apoptosis or by repairing DNA damage occurring during the cell cycle This book discusses the issue of tumor suppressor genes through chapters written by experts using advanced biochemistry cell and molecular biology tools The tumor suppressor genes can be used as markers of risk to identify populations with high risk or targets for cancer treatment and therapeutic resistance We hope that the work provided in this book will be useful for researchers and students and will increase knowledge of the understanding of cancer and improve its treatment
