Introduction To Time-dependent Quantum Mechanics With Python Atanu Bhattacharya, Elliot R Bernstein, 2023-10-18

Computational spectroscopy and computational quantum chemical dynamics is a vast field in physical chemistry. Significant part of this field is developed based on the concepts of time dependent quantum mechanics and its numerical implementations. This book gives an introduction to the Time Dependent Quantum Chemistry for use with any introductory college university course in optics spectroscopy kinetics dynamics or experimental physical chemistry or chemical physics of the kind usually taken by undergraduate and graduate students in physical chemistry. In this book different concepts of time dependent quantum mechanics are systematically presented by first giving emphasis on the contrasting viewpoint of classical and quantum mechanical motion of a particle then by demonstrating the ways to find classical flavour in quantum dynamics thereafter by formally defining the wavepacket which represents a quantum particle and finally by demonstrating numerical methods to explore the wavepacket dynamics in one dimension. Along with the analytical theory accompanying Python chapters in this book take readers to a hands on tour with Python programming by first giving them a quick introduction to the Python programming then by introducing the position space grid representation of the wavefunction thereafter by making them familiarized with the Fourier transform to represent the discretized wavefunction in momentum space subsequently by showing the Python based methodologies to express Hamiltonian operator in matrix form and finally by demonstrating the entire Python program which solves the wavepacket dynamics in one dimension under influence of time independent Hamiltonian following split operator approach. Rigorous class testing of the presented lecture notes at the Indian Institute of Science GITAM University and at NPTEL platform reveals that physical chemistry students after thoroughly going through all chapters not only develop an in depth understanding of the wavepacket dynamics and its numerical implementations but also start successfully writing their own Python code for solving any one dimensional wavepacket dynamics problem.

 Functional Theory and Its Application in the Chemical Domain* Nazmul Islam,Savas Kaya,2018-06-13 In this book new
 developments based on conceptual density functional theory CDFT and its applications in chemistry are discussed It also
 includes discussion of some applications in corrosion and conductivity and synthesis studies based on CDFT The electronic
 structure principles such as the electronegativity equalization principle the hardness equalization principle the
 electrophilicity equalization principle and the nucleophilicity equalization principle along studies based on these electronic
 structure principles are broadly explained In recent years some novel methodologies have been developed in the field of
 CDFT These methodologies have been used to explore mutual relationships between the descriptors of CDFT namely
 electronegativity hardness etc The mutual relationship between the electronegativity and the hardness depend on the
 electronic configuration of the neutral atomic species The volume attempts to cover almost all such methodology Conceptual
