Data, Governance and Narrative Scott Edward Bennett, 2025-03-31 This book examines how participants in governance and public affairs use data and information in defining public problems and their solutions. It is based on 18 in-depth interviews with various kinds of participants in the public realm in Canada and the UK: legislators, interest group representatives, journalists, and civil servants. Responses are examined against the backdrop of two classical perspectives on decision making. It explores the types of data respondents emphasized in their work and what model of decision making best reflected the realities of defining problems and selecting solutions in governance. The book demonstrates how there is a significant interplay between the long and short-term aspects of governance. Narratives and data are inextricably intertwined in governance. The book explores the role of narratives in linking portrayals of the public good to problem definition and solution creation. It presents practical insights on how to approach generating and using data for the guidance of governing decisions, the implications of various kinds of research designs, and for the normative practice of governance.

Big Data, Databases and "Ownership" Rights in the Cloud Marcelo Corrales Compagnucci, 2019-11-02 Two of the most important developments of this new century are the emergence of cloud computing and big data. However, the uncertainties surrounding the failure of cloud service providers to clearly assert ownership rights over data and databases during cloud computing transactions, and big data services have been perceived as imposing legal risks and transaction costs. This lack of clear ownership rights is also seen as slowing down the capacity of the Internet market to thrive. Click-through agreements drafted on a take-it-or-leave-it basis govern the current state of the art, and they do not allow much room for negotiation. The novel contribution of this book proffers a new contractual model advocating the extension of the negotiation capabilities of cloud customers, thus enabling an automated and machine-readable framework orchestrated by a cloud broker. Cloud computing and big data are constantly evolving and transforming into new paradigms where cloud brokers are predicted to play a vital role as innovation intermediaries, adding extra value to the entire life cycle. This evolution will alleviate the legal uncertainties in society by means of embedding legal requirements in the user interface and related computer systems or its code. This book situates the theories of law and economics and behavioral law and economics in the context of cloud computing and takes database rights and ownership rights of data as prime examples to represent the problem of collecting, outsourcing, and sharing data and databases on a global scale. It does this by highlighting the legal constraints concerning ownership rights of data and databases and proposes finding a solution outside the boundaries and limitations of the law. By allowing cloud brokers to establish themselves in the market as entities coordinating and actively engaging in the negotiation of service level agreements (SLAs) with individual customers as well as small and medium-sized enterprises, they could efficiently and effortlessly choose a cloud provider that best suits their needs. This

approach which the author calls plan like architectures endeavors to create a more trustworthy cloud computing environment and to yield radical new results for the development of the cloud computing and big data markets *Tourism and Sustainable Regional Development in Indonesia* Indonesian Regional Science Association, 2017-05-13 to ensure that this tourism development strategy will produce the expected outcomes i.e. the target aimed for by 2019 Indonesia needs to thoroughly research its tourism development strategy its implementation and various other aspects of the tourism sector Dr Ir Arief Yahya M.Sc.
