The data sets used in the examples and problems are provided on the web. Answers to the odd numbered problems are given in the book. The first five chapters review descriptive statistics, including ways of representing data graphically, statistical measures, the normal distribution, and probability and sampling. The remainder of the text covers inferential statistics involving means, proportions, variances, and correlations, basic and advanced analysis of variance, and regression models. Topics not dealt with in other texts, such as robust methods, multiple comparison, and nonparametric procedures, and advanced ANOVA and multiple and logistic regression models, are also reviewed.
