in play **Theories of Development** William Crain, 2015-10-02 The result of extensive scholarship and consultation with leading scholars this text introduces students to twenty four theorists and compares and contrasts their theories on how we develop as individuals Emphasizing the theories that build upon the developmental tradition established by Rousseau this text also covers theories in the environmental learning tradition **The Fishbowl Principle**

Gendelman, Miller, Taus, 2009-12 At the core it doesn't matter what you believe governs the fate of man and Earth what matters is that humans as a global society build a future that is sustainable and peaceful This is the ultimate human evolutionary development this is our challenge By tracing our existence from where we began to what we have become today this book explores the evolution and should we continue on our current path the subsequent possible obsolescence of human beings Far from a doomsday tome The Fishbowl Principle challenges readers to expand their worldview We need to change our measure of a successful life from simply existing to prospering The authors refuse to accept that life as we exist today is as good as it gets We argue that humans have reached a fragile tipping point and that instead of fragmenting and isolating ourselves in a future of despair we can and will work together to an even higher apex As a human race we examine what can be achieved if we look to our similarities instead of our differences If we could harness communication as a powerful and cost effective tool to bring us together and educate ourselves in a way that fosters sustainable and responsible population growth the positive transformation to our lives would be immeasurable Whether you exist today as a peasant in a tribal setting or as an urban dweller we explore fostering a sense of global community based on common ground not just niche existence We present tangible alternatives and pose thought provoking questions Our vision is a collaborative one and requires your participation A path back to evolution starts with you and includes all of us **The Emotional Lives of Animals & Children**

William Crain, 2014-10-17 In 2008 Bill Crain a professor of psychology at The City College of New York and his wife Ellen a pediatrician opened Safe Haven Farm Sanctuary in Poughquag New York The sanctuary provides a permanent home to over 70 animals rescued from slaughter and abusive situations including goats sheep chickens turkeys ducks partridges and a mini horse It also has afforded Bill a tremendous opportunity to observe animals in all manner of emotional states and how their behavior casts light on the emotions of human children In The Emotional Lives of Animals and Children Crain honors the work of John Bowlby a psychoanalyst who began his major writings in the 1950s Bowlby drew on biologists observations of animals to provide a compelling account of children's attachment to their caretakers Today the study of attachment is extremely popular Crain writes but one would hardly know that the initial inspiration came from observations of non human animals Moreover there has been little effort to extend Bowlby's work to see how the study of animals illuminates other aspects of child development Crain suggests that the reluctance to follow Bowlby's lead reflects the Western worldview that considers humans as different from and superior to other species To think about children in the same category as animals seems to demean children But Crain discovered that the farm animals emotional behaviors can help us

understand those of human children The Emotional Lives of Animals and Children is divided into two parts Part one discusses six emotional behaviors that are shared by animals and children fear play freedom care spirituality and resilience Part two addresses the broader social theme of our Western culture s disparagement of animals Initially children do not set themselves apart from nature but experience it with an instinctive empathy However they are eventually taught by our society to detach themselves and to devalue animals Crain writes As people attempt to move beyond society s dominant views of animals they can also draw on a neglected idea that goes back to ancient times This is the view that there is a special wisdom in the child s ways of knowing This view is found in the ancient Chinese Taoist statement wise souls are children About Safe Haven Farm Sanctuary Safe Haven Farm Sanctuary is located in Poughquag New York about an hour and a half outside of New York City Its focus is on the rescue of abused and neglected farm animals In doing so it hopes to raise awareness of the plight of animals raised for food and the benefits of a vegan diet for animals human health and the environment Wherever possible the sanctuary tries to implement environmentally sound practices such as solar heating and the use of reclaimed wood

Forever Young William Crain, 2021-12-13 Celebrate and Rediscover the Restorative Power of Childhood It s easy to sometimes feel that our lives have become dull and stagnant Now in Forever Young psychologist William Crain invites us to consider how six great individuals were able to call upon the powers of childhood to restore their spirits and nurture their creativity Explore the remarkable biographies of Henry David Thoreau Albert Einstein Charlotte Bront Howard Thurman Jane Goodall and Rachel Carson and discover how each one revived childhood qualities such as a sense of wonder playfulness and a feeling for nature and in the process overcame personal roadblocks and expanded our understanding of the world Following these inspiring stories Crain also offers practical suggestions for how we too can reclaim the spirit and strengths of childhood to help us uncover meaning and purpose in our own lives

Other Selves Janice Fiamengo, 2007-07-12 Other Selves Animals in the Canadian Literary Imagination begins with the premise first suggested by Margaret Atwood in The Animals in That Country 1968 that animals have occupied a peculiarly central position in the Canadian imagination Unlike the longer settled countries of Europe or the more densely populated United States in Canada animals have always been the loved and feared co inhabitants of this harsh beautiful land From the realistic animal tales of Charles G D Roberts and Ernest Thompson Seton to the urban animals of Marshall Saunders and Dennis Lee to the lyrical observations of bird enthusiasts John James Audubon Thomas McIlwraith and Don McKay animals have occupied a key place in Canadian literature focusing central aspects of our environmental consciousness and cultural symbolism Other Selves explores how and what the animals in this country have meant through all genres and periods of Canadian writing focusing sometimes on individual texts and at other times on broader issues Tackling more than a century of writing from 19th century narrative of women travellers to the natural conversion of Grey Owl to the award winning novels of Farley Mowat Marian Engel Timothy Findley Barbara Gowdy and Yann Martel these essays engage the reader in this widely

acknowledged but inadequately explored aspect of Canadian literature **Handbook of Energy** Cutler J. Cleveland, Christopher G. Morris, 2013-05-02 Handbook of Energy Volume I Diagrams Charts and Tables provides comprehensive organized coverage on all phases of energy and its role in society including its social economic political historical and environmental aspects While there is a wealth of information about energy available it is spread across many books journals and websites and it tends to target either a particular form of energy or a specific audience Handbook of Energy provides a central repository of information that meets diverse user communities It focuses on visual graphic and tabular information in a schematic format Individuals and researchers at all educational levels will find the Handbook of Energy to be a valuable addition to their personal libraries Easy to read technical diagrams and tables display a vast array of data and concepts **Waking the Power Within Thermodynamics and the Human Battery** Professor Ibrahim elnoshokaty , The sci fi film The Matrix introduces a fascinating premise where humans function as energy sources for an advanced machine society In this fictional world human bodies are maintained in a state of suspended animation while their minds exist in a virtual reality allowing machines to extract their bioelectric thermal and kinetic energy This article investigates the scientific feasibility of utilizing humans as a power source by applying thermodynamic principles According to the first law of thermodynamics the energy required to sustain human life would result in a net energy loss for the machines The second law indicates that the system's entropy would rise rendering it an inefficient energy strategy Furthermore the energy output of a human body even if fully utilized would be inadequate to meet the machines energy demands More efficient alternatives for the machines would include other biological power sources and energy harvesting techniques such as solar or nuclear power The article concludes that while the concept of human batteries serves as an engaging storytelling element it is not a scientifically viable solution for the machines energy requirements The machines choice to preserve human life may be motivated by other factors such as leveraging their collective cognitive abilities for computational purposes or adhering to an ethical code that prohibits the complete annihilation of humanity This investigation aims to fill the gap by providing a detailed thermodynamic analysis of the energy expenditure required to sustain human life in a suspended animation state and the inefficiency of this system as an energy source for machines a facet previously unexplored By elucidating the thermodynamic constraints of human based energy sources this study not only challenges a popular sci fi narrative but also enriches our understanding of bioenergetic processes and their implications for future energy harvesting technologies **BIOLOGI DASAR** Dr. Muhammad Komarul Huda, M.Pd ,Sulasmi, SST., M.Tr.Keb ,Qiswatun Mukhoyyaroh, M.Pd,Jamilah Nasution, S.Pd., M.Si ,dr. Lubna Anwar Sadat, M.K.K., Sp.Ok ,Radiansyah Hadi Chandra, S.Pd., M.Si ,Nurmaini Ginting, M.Si ,Dr. Agus Suprpto, S.P., M.P., IPM ,Ibrahim bin Sa'id, Phd ,Soni Muhsinin, M.Si ,2024-06-26 Biologi adalah ilmu yang mempelajari kehidupan dan organisme hidup termasuk struktur fungsi pertumbuhan evolusi distribusi dan taksonomi mereka Sebagai ilmu pengetahuan yang luas dan kompleks biologi mencakup
