G. R. Briggs, 2002 Effects of Context-oriented Learning on Student Interest and Achievement in Chemistry Education Sabine Fechner, 2009 Der Chemieunterricht sieht sich nicht erst seit PISA mit dem Anspruch konfrontiert einerseits die Lernenden von der Relevanz des Faches zu überzeugen und andererseits zu gewährleisten dass sie genug vernetztes Konzeptwissen erwerben um eine naturwissenschaftliche Berufslaufbahn wählen zu können An diesem Spannungsfeld setzt die vorgestellte Studie an anhand eines experimentellen Designs wird der Erwerb von Wissen in lebensweltlichen im Gegensatz zu fachlichen Kontexten evaluiert Fünf Experimentierphasen dienen als Grundlage um die Effizienz der jeweiligen Kontexte in Verbindung mit wiederholenden Vernetzungsmassnahmen zu untersuchen Die gewählten Messinstrumente ermöglichen hierbei eine detaillierte Beschreibung der Effekte der Interventionsmassnahmen beim kooperativen Arbeiten im Chemieunterricht Especially since the weak results of German students in large scale assessments like PISA chemistry education has been challenged It is supposed to bridge the gap between making it relevant to the learner and ensuring that learners acquire enough content knowledge to cope with university demands The presented study emanates from this ambiguity by evaluating the acquisition of content knowledge in different contexts By means of an experimental design student learning gains in tasks with a real life problem situation are compared to a laboratory setting A one week intervention serves as a basis to assess the effects of such contexts in a collaborative and inquiry based learning environment The selected test instruments offer the possibility to shed light on differentiated effects of contexts with relation to learner prerequisites Improving Learning in Secondary Schools Kenneth Ndifor Tangie, 2015-09-10 Improving Learning in Secondary Schools brings together in a succinct comprehensive and thought provoking manner several dimensions of classroom assessment feedback in one volume It is based on the principle that students need feedback on their work and conduct at school in order to be able to correct misconceptions and omissions that can render them incapable of making progress and learning in a given subject The book reports on a doctoral study that examined teachers feedback practice and its relation to student learning in secondary schools It presents a critical fine grained classification and analysis of positive neutral and negative feedback categories in teacher talk and writing which could generate a globally applicable typology and theory of classroom feedback For some time now formative assessment generated feedback has been widely recommended for classrooms thanks mainly to compelling research based evidence showing the relative merits of formative assessment types over more traditional summative assessment practices In this book it is suggested that the time has come to depart from such arguments because the mere presence of feedback in teacher talk and writing be it formative or summative is not enough to support learning Feedback like formal and informal instruction and

assessment is not mediated in vacuo it is a social process taking place in a social setting conducted by on and for social actors One must also consider the context especially the linguistic and socio cultural environment in which assessment feedback and learning occur but which also acts as a barrier and facilitator to successful feedback provision and uptake This argument should constitute a starting point for reflection debate and research into the effectiveness for learning of classroom assessment feedback Therefore whilst complementing previous work on this subject this book makes significant additions to a very important aspect of school life Primary and secondary school teachers university students academics and researchers as well as educationists and policy makers in the domain of educational assessment will find in it an inseparable companion and resource tool Small-scale Freshwater Toxicity Investigations Christian Blaise, Jean-François Férard, 2006-01-16

Developed developing and emerging economies worldwide are collectively contributing multiple stresses on aquatic ecosystems by the release of numerous contaminants This in turn demands that basic toxicological information on their potential to harm living species be available Hence environmental protection programs aimed at preserving water quality must have access to comprehensive toxicity screening tools and strategies that can be applied reliably and universally While a good number of toxicity testing procedures and hazard assessment approaches have been published in the scientific literature over the past decades many are wanting in that insufficient detail is available for users to be able to fully understand the test method or scheme and to be able to reproduce it successfully Even standardized techniques published in recognized international standard organization documents are often lacking in thoroughness and minutiae Paucity of information relating to biological test methods may be consequent and trigger several phenomena including generation of invalid data and resulting toxicity measurements erroneous interpretation and decision taking with regards to a particular chemical or environmental issue or simply abandonment of testing procedures Clearly improperly documented toxicity testing methods can be detrimental to their promotion and use as they open the doorway to unnecessary debate and criticism as to their raison d'être Furthermore this situation can indirectly contribute to delaying minimizing or eliminating their application thereby curtailing the important role toxicity testing plays in the overall protection and conservation of aquatic ecosystems *Inorganic Chemistry For Dummies* Michael Matson, Alvin W.
