**Research in Chemistry Education** Liliana Mammino, Jan Apotheker, 2021-05-17 This volume emphasizes the role of chemical education for development and in particular for sustainable development in Africa by sharing experiences among specialists across the African continent and with specialists from other continents. It considers all areas and levels of chemistry education, gives specific attention to known major challenges and encourages explorations of novel approaches. This makes the volume an up-to-date compendium for chemistry educators and educational researchers worldwide. *Understanding Correlation Matrices* Alexandria Hadd, Joseph Lee Rodgers, 2020-12-06 Correlation matrices, along with their unstandardized counterparts, covariance matrices, underlie the majority of the statistical methods that researchers use today. A correlation matrix is more than a matrix filled with correlation coefficients. The value of one correlation in the matrix puts constraints on the values of the others, and the multivariate implications of this statement is a major theme of the volume. Alexandria Hadd and Joseph Lee Rodgers cover many features of correlations matrices, including statistical hypothesis tests, their role in factor analysis and structural equation modeling, and graphical approaches. They illustrate the discussion with a wide range of lively examples, including correlations between intelligence measured at different ages, through adolescence, correlations between country characteristics such as public health expenditures, health life expectancy, and adult mortality, correlations between well-being and state-level vital statistics, correlations between the racial composition of cities and professional sports teams, and correlations between childbearing intentions and childbearing outcomes over the reproductive life course. This volume may be used effectively across a number of disciplines in both undergraduate and graduate statistics classrooms and also in the research laboratory.
