## new horizons in medicine

Understanding the human genome can be seen as the key to understanding the mystery of human life itself. The Human Genome Project set out to identify all of the genes in the human chromosome (around 30,000) and to sequence the letters of those genes which make up human DNA. As a result of advances in the technology used to sequence DNA, the task of producing the complete human genome was accomplished two years ahead of schedule.

### Sequencing the DNA

### Diagnostic testing

Tests using gene probes are being developed to diagnose 'hidden diseases' in a person's cells. In the future, it may be possible to identify a person's risk of developing a disease before it starts, or to identify a person's risk of developing a disease before it starts.

### Right drug, right place

Genes are the instructions for making proteins. Some genes are 'switched on' and some are 'switched off'. Some genes are 'switched on' and some are 'switched off'. Some genes are 'switched on' and some are 'switched off'.

### Gene therapy

Gene therapy is the process of replacing a faulty gene with a normal one. It is a new way of treating genetic diseases. It is a new way of treating genetic diseases. It is a new way of treating genetic diseases.

### International involvement

The Human Genome Project was a truly international effort. Scientists from many different countries worked together to complete the project.
