The Theory of Environmental Agreements and Taxes Martin Enevoldsen,2005-01-01 Martin Enevoldsen s book is a pioneering work that compares the impacts of various non regulatory environmental strategies in achieving measurable pollution reductions Much has been written on the theoretical virtues and drawbacks of green taxation versus the adoption of voluntary agreements when it comes to effective implementation of environmental goals In convincing detail this book makes the case for the effectiveness of environmental taxation its barriers being primarily political in nature rather than economic Green taxes are highly controversial even in the most environmentally conscious nations particularly when they are regarded as a purely fiscal instrument The successful Danish CO2 taxation on industry which this study proves to be much more effective than the Dutch system of voluntary agreements or the Austrian laissez faire policies relied not only on the inducement of the CO2 tax itself all of the tax revenue was ploughed back into industry as subsidies for investments in advanced energy saving technologies Martin Enevoldsen s book is simply a must for political scientists environmental economists and environment policymakers Svend Auken M P and former Danish Minister for Environment and Energy Although there is a huge demand for accurate analysis of environmental policy outcomes in both the academic and policy making communities there is currently very little theoretical research on this issue This ambitious book redresses the balance by constructing a new theoretical framework at the crossroads between economics and political science to account for the effectiveness of environmental governance Drawing on insights from new institutional economics environmental economics collective action theory and social capital theory the author analyses how policy outcomes are influenced by institutional factors that constrain and empower the target groups of environmental regulation

more and more common globally whether for comfort adapting to work hours or just having the freedom to study from anywhere And now under the coronavirus pandemic as people are having to stay at home it has become more important than ever Although the popularity of wireless network and portable smart device makes it possible for people to acquire and learn knowledge anytime and anywhere it does not necessarily mean an increased learning performance Relevant research in cognitive science has revealed possible limitations in online learning For example the knowledge acquired through online learning tends to be fragmented and lacks guidance for integrated thinking among different subjects which makes it difficult

for learners to form a systematic knowledge structure. Learners may experience cognitive overload, metacognitive illusion, and low learning efficiency in self-regulated learning. It follows that in the post-COVID 19 era, online learning puts forward new requirements and challenges to contemporary students, not only to their learning strategies but also to positive character traits in learning. Most of the current learning theories were developed in the early 20th century and may not fit well with the current situation, then possibly leading to inefficient learning and increased learning burden. Therefore, it is necessary and important to reexplore the influencing factors and mechanisms that affect the learning efficiency of students at all levels nowadays, based on which we could construct a theoretical model of an efficient learning model.

Roots of War David G. Winter, 2018. *Roots of War* presents systematic archival, experimental, and survey research on three psychological factors leading to war: desire for power, exaggerated perception of threat, and justification for force, set in comparative historical accounts of the unexpected 1914 escalation to world war and the peacefully resolved 1962 Cuban Missile Crisis. Provided by publisher. [Journal of the Senate of the United States of America](#) United States. Congress. Senate, **Electric Power Transmission and Distribution** S. Sivanagaraju, S. Satyanarayana, 2009. *Electric Power Transmission and Distribution* is a comprehensive text designed for undergraduate courses in power systems and transmission and distribution. A part of the electrical engineering curriculum, this book is designed to meet the requirements of students taking elementary courses in electric power transmission and distribution. Written in a simple, easy-to-understand manner, this book introduces the reader to electrical, mechanical, and economic aspects of the design and construction of electric power transmission and distribution systems.

The Third Awakening Eric Kaufmann, 2024-05-14. We in the West are in the third wave of cultural left ideological enthusiasm. Each Awakening has crested, fallen a little, consolidated, then surged again to reach a higher level. The cumulative result is an elite creed which has produced a crime wave, a worsening education system, chaos at the border, and social division. Fired by a cultural socialism that puts equal results and emotional protection for minorities at the center of their moral universe, today's young people are twice as intolerant of conservative speech as older generations. These young people will be the median voters and employees of tomorrow, leading and controlling the country. Woke cultural socialism is not the classical liberalism of the American Constitution but a modern majorities-bad-minorities-good Left liberalism. It is powered by a set of liberal emotional attachments rather than liberal principles. These underpin a moral panic about whites and males combined with a starry-eyed patronizing approach to minorities. Today's woke extremism is not a repudiation of liberalism but a perverse extension of it. Our only way out is to use elected constitutional government power to break the grip of wokeness in our institutions and schools, steering them toward neutrality and classical liberalism. To do so, the conservative and moderate majority must place culture front and center and spare no effort to win the battle of ideas. Nothing less than the future of our civilization depends on it.
