

Chapter 13 Universal Gravitation

Match each position or movement of an elevator with your weight if you stepped on a scale in the elevator.

- | Elevator Position or Movement | Weight Reading |
|------------------------------------|------------------------------|
| <u>b</u> 37. sitting still | a. no weight |
| <u>d</u> 38. accelerating downward | b. normal weight |
| <u>c</u> 39. accelerating upward | c. greater weight than usual |
| <u>a</u> 40. falling freely | d. less weight than usual |
41. Rather than define your weight as the force of gravity that acts on you, it is more practical to define weight as the force you exert against a supporting floor.
42. Is the following sentence true or false? Weightlessness is the absence of gravity. false
43. Explain why rotating giant wheels will likely be used as space habitats in the future.
Rotation will supply a support force for astronauts, giving them a sense of weight.

13.9 Ocean Tides (pages 246–248)

44. How often does a high tide occur? twice per day
45. Is the following sentence true or false? The pull of the moon and Earth on each other causes them both to be slightly elongated rather than spherical. true

46. The figure shows the moon near the spinning Earth. Use the figure to explain the cause of ocean tides on Earth. In your explanation, describe why the arrows in the figure are different lengths.
The arrows show that the gravitational pull of the moon is stronger on the ocean water nearest the moon and weaker on the opposite side, causing a bulge on each side. As Earth spins, a fixed point moves under both bulges each day.
47. Circle the letter of the fraction that compares the sun's contribution to ocean tides to the moon's contribution.
a. one sixteenth b. one fourth
c. one eighth d. one half
48. The sun's pull on Earth is 180 times greater than the moon's pull on Earth.
