You want to check if that will fit in your new room. So, your parents give you a scaled drawing of your bedroom, but something is missing – the scale! When you ask your parents what the scale is, they say, “We don’t know, but it is helps you, so do know that the sheet is 1 ft by 2 ft.”</p> <p>(Students will be given a scale drawing of a room. The scale will be 2 inches to 8 feet. Dimensions will not be given on the drawing. Students will have to measure the walls in the drawing.)</p>		
<p>3. Solving Problems</p> <p>Anticipated Students’ Solutions</p> <ul style="list-style-type: none"> Ⓐ Students will use ruler to find dimensions of drawing. Ⓑ Students will use fractions to express proportional relationships of drawing to actual bedroom. Ⓒ Students will use multiplication to solve for missing dimensions. Ⓓ Students will use division to solve for missing dimensions. Ⓔ Students will create a chart to express proportional relationships. Ⓕ Students will recognize that some dimensions are equal, and use quantities already calculated. 	<p>Students will have a copy of the scale drawing and a ruler.</p>	
<p>4. Comparing and Discussing</p> <p>Students will be given the time to work with their team in finding the dimensions of the scale drawing and the dimensions of the bedroom.</p> <p>Groups of students will be called up to the board to explain their solutions.</p>	<p>Teacher will monitor teams and observe strategies for solving the problem.</p> <p>Call students to board in order of increasing difficulty of solutions. Ask students, “How can we check this solution?” Have other students explain solution.</p>	<p>Are there any groups that were stuck or so late to solve the problem?</p> <p>Do all the groups understand that there is more than one way to solve the problem?</p> <p>Do the students recognize the different ways of expressing the proportional relationships?</p>
<p>4. Scoring/Key:</p> <p>In journal, students will write, “What are the different ways that you can use a scale drawing to find dimensions of an actual place?”</p>		<p>Do students understand how to use a proportional relationship to find unknown quantities?</p>

Through detailed lessons and examples, discover how to integrate technology in 6-12 math to amplify and enhance your mathematics teaching and drive student learning. Instead of drill and practice apps and worksheets, what if technology enabled exploration of math concepts? Instead of screens for disconnected individual learning, what if technology fostered mathematical discourse and collaboration? Instead of a one-size-fits-all approach to teaching mathematics, what if we used technology to differentiate to meet students' diverse needs? Technology has the power and potential to support the teaching and learning of math content at all grade levels, but the presence of technology is insufficient unless it's paired with effective teaching practices and meaningful content. This book poses and unpacks the above questions and many more with examples that illustrate how to integrate technology in the 6-12 math classroom, highlighting opportunities to transform mathematics teaching through strategic technology use. The book illustrates two contrasting examples in each chapter, including transcripts of sample class conversations, mathematical tasks, illustrations of student work, and reflection and discussion prompts. Features discussion of research-based ideas relating to the contrasts presented in the chapters, encouraging readers to connect what they learn from the specific cases with the research on these topics. Covers a variety of mathematics content areas such as functions and algebraic thinking, geometry and measurement, and data and statistics. Provides strategies for implementing the concepts in class with ideas and examples of tools based not on how they look but what they can do in your mathematics teaching. Today's technology offers more possibilities than ever for supporting students in mathematics. This book draws upon the latest research in technology and math education while providing tools to
