chapters cover design procedures actions and loads prestressing systems and construction requirements connections and detailing and design concepts for prestressed concrete bridges The topic of serviceability is developed extensively throughout All the authors have been researching and teaching the behaviour and design of prestressed concrete structures for over thirty five years and the proposed new edition of the book reflects this wealth of experience The work has also gained much from Professor Gilbert active and long time involvement in the development of standards for concrete buildings and concrete bridges

Connections between Steel and Concrete Rolf Eligehausen, Werner Fuchs, Philipp Grosser, Giovacchino Genesio, 2012-02-27 Anchorage by fasteners and composite structures of steel and concrete have seen dramatic progress in research technology and application over the past decades The understanding of the fundamental principles underlying both disciplines has significantly improved Concurrently there has been rapid growth in the development of sophisticated new products and the establishment of international directives and codes to ensure their safe and economical use in a wide range of engineered structures Although they deal with very similar problems the two disciplines have developed independently from each other To optimize the use of composite structures and fastenings to concrete however it is necessary to have knowledge of both the local behavior of the fastening system and the global behavior of the structure It became apparent that a forum offering the opportunity to expand and to exchange experience in the field of connecting steel and concrete would benefit all involved Furthermore this forum would aid in the rapid dissemination of new ideas technologies and solutions as well as explore new areas of research This book forms the Proceedings of the 2 Symposium on Connections between Steel and Concrete As the 1 Symposium in 2001 it brought together leading experts from all facets of the research design construction and anchor manufacturing community from around the world Their lectures covered the topics test methods behavior and design dynamic loading shock earthquake fatigue durability exceptional applications strengthening and structures related topics In total 129 papers are gathered in these 2 volumes
