The Reception of Darwinian Evolution in Britain, 1859–1909 Martin Hewitt, 2024-10-20 The Reception of Darwinian Evolution in Britain 1859 1909 Darwinism's Generations uses the impact of Charles Darwin's On the Origin of Species 1859 in the 50 years after its publication to demonstrate the effectiveness of a generational framework for understanding the cultural and intellectual history of Britain in the nineteenth century It challenges conventional notions of the Darwinian Revolution by examining how people from across all sections of society actually responded to Darwin's writings Drawing on the opinions and interventions of over 2 000 Victorians drawn from an exceptionally wide range of archival and printed sources it argues that the spread of Darwinian belief was slower more complicated more stratified by age and ultimately shaped far more powerfully by divergent generational responses than has previously been recognised In doing so it makes a number of important contributions It offers by far the richest and most comprehensive account to date of how contemporaries came to terms with the intellectual and emotional shocks of evolutionary theory It makes a compelling case for taking proper account of age as a fundamental historical dynamic and for the powerful generational patternings of the effects that age produced It demonstrates the extent to which the most common sub periodisation of the Victorian period are best understood not merely as constituted by the exigencies of events but are also formed by the shifting balance generational influence Taken together these insights present a significant challenge to the ways historians currently approach the task of describing the nature and experience of historical change and have fundamental implications for our current conceptions of the shape and pace of historical time

The Eclipse of Darwinism Peter J. Bowler, 1983 In this pioneering study of the first major challenges to Darwinism Peter J Bowler examines the competing theories of evolution identifies their intellectual origins and describes the process by which the modern concept of evolution emerged Describing the variety of influences that drove scientists to challenge Darwin's conclusions Bowler reevaluates the influence of social forces on the scientific community and explores the broad philosophical ideological and social implications of scientific theories

Viroid Life Keith Ansell Pearson, 2012-10-12 Nietzsche's vision of the overman continues to haunt the postmodern imagination His call that man is something that must be overcome can no longer be seen as simple rhetoric Our experiences of the hybrid realities of artificial life have made the transhuman a figure that looks over us all Inspired by this vision Keith Ansell Pearson sets out to examine if evolution is out of control and machines are taking over In a series of six fascinating perspectives he links Nietzsche's thought with the issues at stake in contemporary conceptions of evolution from the biological to the technological Viroid Life Perspectives on Nietzsche and the Transhuman Condition considers the hybrid inhuman character of our future with the aid of Nietzsche's philosophy Keith Ansell Pearson contrasts Nietzsche and Darwin before introducing the more recent figures such as Giles Deleuze and Guy Debord to sketch a new thinking of technics and machines and stress the ambiguous character of our machine enslavement

Empiricism and Darwin's Science F. Wilson, 2012-12-06 I would like to record my thanks to Paul Thompson for useful conversations over the years and also to several generations of students who have helped me develop my ideas on biological theory and on Darwin My wife has as usual been more than helpful in particular she typed a good portion of the manuscript while I was on leave a few years ago more now than I like to remember My parents were both looking forward to holding a final copy of this book I only regret that my mother did not live long enough to see its completion I must also thank the publishers and their staff They have been remarkably patient about meeting deadlines promises were repeatedly made and then owing to family situations had to be broken and for this I am considerably in their debt I would further like to thank the following authors and publishers for permission to use their work R C Lewontin The Genetic Basis of Evolutionary Change Figure 1 p 14 1964 Columbia University Press reprinted here by kind permission of the author and publisher F Wilson Goudge s Contribution to the Philosophy of Science in L W Sumner J G Slater and F Wilson eds Pragmatism and Purpose Essays in Honour of T A Goudge 1964 University of Toronto Press reproduced here in part by kind permission of all the editors and the publisher

The Reception of Darwinism in the Iberian World T.F Glick, Miguel Angel Puig-Samper, R. Ruiz, 2001-10-31 I Twenty five years ago at the Conference on the Comparative Reception

of Darwinism held at the University of Texas in 1972 only two countries of the Iberian world Spain and Mexico were represented At the time it was apparent that the topic had attracted interest only as regarded the mainstream science countries of Western Europe plus the United States The Eurocentric bias of professional history of science was a fact The sea change that subsequently occurred in the historiography of science makes 1972 appear something like the antediluvian era Still we would like to think that that meeting was prescient in looking beyond the mainstream science countries as then perceived in order to test the variation that ideas undergo as they pass from center to periphery One thing that the comparative study of the reception of ideas makes abundantly clear however is the weakness of the center periphery dichotomy from the perspective of the diffusion of scientific ideas Catholics in mainstream countries for example did not handle evolution much better than did their coreligionaries on the fringes Conversely Darwinians in Latin America were frequently better placed to advance Darwin's ideas in a social and political sense than were their fellow evolutionists on the Continent The Texas meeting was also a marker in the comparative reception of scientific ideas Darwinism aside Although by 1972 scientific institutions had been studied comparatively there was no antecedent for the comparative history of scientific ideas

Gene Avatars Pierre-Henri Gouyon, Jean-Pierre Henry, Jacques Arnould, 2007-05-08 Why life Questions of this type were for a long time the prerogative of philosophers who left the how question to scientists Nowadays Darwin's successors no longer have any qualms about addressing the why as well as the how Over a century ago Darwin modestly admitted having thrown some light on the origin of species this mystery of mysteries Two major advances in the following decades helped biologists answer many of the questions he left unsolved The first was the discovery of the laws of heredity the second that of DNA Both provided Darwinian theory with the foundations that were lacking and led to the all embracing neo Darwinian synthesis Since then Theodosius Dobzhansky's aphorism nothing in biology makes sense except in the light of evolution has proven true more than once This does not suit everyone as evolutionist ideas have not lost their power to cause a scandal Darwin toppled man from his pedestal Evolutionary genetics the subject of this book sends the individual crashing Considered until recently to be the target of selection and the focus of evolution the individual has been usurped by the gene The individual is nothing but the gene's avatar
