Environmental Organic Chemistry René P. Schwarzenbach, Philip M. Gschwend, Dieter M. Imboden, 2005-06-24

Environmental Organic Chemistry focuses on environmental factors that govern the processes that determine the fate of organic chemicals in natural and engineered systems The information discovered is then applied to quantitatively assessing the environmental behaviour of organic chemicals Now in its 2nd edition this book takes a more holistic view on physical chemical properties of organic compounds It includes new topics that address aspects of gas solid partitioning bioaccumulation and transformations in the atmosphere Structures chapters into basic and sophisticated sections Contains illustrative examples problems and case studies Examines the fundamental aspects of organic physical and inorganic chemistry applied to environmentally relevant problems Addresses problems and case studies in one volume

Environmental and Resources Geochemistry of Earth System Naotatsu Shikazono, 2015-01-05 The Earth system consists of subsystems that include the atmosphere hydrosphere water geosphere rocks minerals biosphere and humans In order to understand these subsystems and their interactions it is essential to clarify the mass transfer mechanism geochemical cycle and influence of human activity on the natural environment This book presents fundamental theories thermodynamics kinetics mass balance model coupling models such as the kinetics fluid flow model the box model and others concerning mechanisms in weathering formation of hydrothermal ore deposits hydrothermal alteration formation of groundwater quality and the seawater system The interaction between fluids atmosphere water and solid phases rocks minerals occurs both in low temperature and also in high temperature systems This book considers the complex low temperature cycle with the high temperature cycle a combination that has not been dealt with in previous books concerning Earth systems Humanity is a small part of the biosphere however human activities greatly influence Earth's surface environments atmosphere hydrosphere biosphere soils rocks Thus the influences of humans on other subsystems particularly mass transfer in the deep underground geologic environment composed of host rocks and groundwater are discussed in relation to high level nuclear waste geologic disposal and CO₂ underground sequestration topics that have not been included in other books on environmental science

Worden, Sadoun Morad, 2009-09-18 Quartz is the major porosity reducing cement in many sandstone sequences Therefore Quartz cements represent a key source of petrographic and geochemical information about diagenetic history They are also the major determinant of sandstone reservoir quality While the ultimate goal of research in this area is to make robust predictions about the amount and distribution of quartz cements in a wide variety of depositional and burial settings there are nevertheless large areas of the subject that are poorly understood and remain the subject of controversy The aim of this Volume which is based partly on papers submitted to a 1996 workshop in Belfast and partly on invited contributions is to bring together some of the main strands of research into quartz cements and provide a focus for debate and direction for future research This book will be welcomed by sedimentologists petrographers and geochemists involved in sandstone diagenesis as well as by petroleum geologists seeking a deeper understanding of the factors influencing reservoir porosity and permeability Contributors from 11 countries and 4 continents Represents the benchmark in quartz cement research If you are a member of the International Association of Sedimentologists for purchasing details please see <http://www.iasnet.org/publications/details.asp?code=SP29>

Lewis Base Catalysis in Organic Synthesis, 3 Volume Set Edwin Vedejs, Scott E. Denmark, 2016-10-10 This three volume set represents the first comprehensive coverage of the rapidly expanding field of Lewis base catalysis that has attracted enormous attention in recent years Lewis base catalysis is a conceptually novel paradigm that encompasses an extremely wide variety of preparatively useful transformations and is particularly effective for enantioselectively constructing new stereogenic centers As electron pair donors Lewis bases can influence the rate and stereochemical course of myriad synthetic organic reactions The book presents the conceptual mechanistic principles that underlie Lewis base catalysis and then builds upon that foundation with a thorough presentation of many different reaction types And last but not least the editors Prof Edwin Vedejs and Prof Scott E Denmark are without doubt the leaders in this emerging field and have compiled high quality contributions from an impressive collection of international experts *Advances in Organometallic Chemistry*, 1988-02-01 *Advances in Organometallic Chemistry* *Integrated Chemical Processes in Liquid Multiphase Systems* Matthias Kraume, Sabine Enders, Anja Drews, Reinhard Schomäcker, Sebastian Engell, Kai Sundmacher, 2022-06-21 Liquid multiphase processes represent a promising option for realizing novel efficient and sustainable production processes as

required for the transformation towards climate neutral manufacturing processes This volume presents the results obtained over twelve years in the DFG funded collaborative project Transregio 63 Integrated Chemical Processes in Liquid Multiphase Systems In an interdisciplinary approach to the design and operation of such processes essential principles of Green Chemistry are realized such as using long chain olefins as model representatives of renewable raw materials highly efficient catalysts and green solvents linked with process optimization to improve energy and material efficiency Experts from different fields addressed all steps of the development process from the description of the reactions on the molecular level via thermodynamics and the design of efficient separation processes to the operation of entire miniplants for liquid multiphase production processes Thus the complete development chain from the first reaction related investigations in the laboratory to the technological realization in miniplants with model based control is demonstrated Numerous methodological innovations are proposed and validated using several innovative phase systems thermomorphic multiphase systems microemulsion systems Pickering emulsions and homogeneously catalyzed reactions Engineers and chemists from the chemical industry as well as advanced students and researchers will get valuable insights into the physico chemical phenomena in chemical multiphase processes and benefit from recommendations concerning methods for the selection of phase systems and rapid model based process development
