## Pearson Chemistry Review Packet:

Super-Intense Laser-Atom Physics Bernard Piraux, Kazimierz Rzazewski, 2001-03-31 The study of atomic systems exposed to super intense laser fields defines an important area in atomic molecular and optical physics Although the concept of super intense field has no absolute meaning it is now usual to call an electromagnetic field super intense when it exceeds the atomic binding field In the case of the simplest atomic system hydrogen in its  $1s$  ground state this occurs above an intensity of  $3.5 \times 10^{16}$  W/cm<sup>2</sup> which is the atomic unit of intensity Presently at the laboratory scale and in extremely short and tightly focussed laser pulses the electric field strength  $1.6 \times 10^{12}$  V/m reaches peak values which are of the order of  $10^{10}$  W/cm<sup>2</sup> in the infrared frequency regime the prospect being that such peak intensities may be reached within a few years in a regime of much higher frequencies XUV or even X The interaction of such electromagnetic fields with an atomic system has a highly non linear character which has led to the observation of totally unexpected phenomena There are three fundamental processes which have marked the beginning of an intensive research in the field of super intense laser atom physics SILAP These processes which only involve one atomic electron are i the so called above threshold ionisation i e Time-Resolved Spectroscopy Thomas Weinacht, Brett J. Pearson, 2018-12-21 This concise and carefully developed text offers a reader friendly guide to the basics of time resolved spectroscopy with an emphasis on experimental implementation The authors carefully explain and relate for the reader how measurements are connected to the core physical principles They use the time dependent wave packet as a building block for understanding quantum dynamics progressively advancing to more complex topics The topics are discussed in paired sections one discussing the theory and the next presenting the related experimental methods A wide range of readers including students and newcomers to the field will gain a clear and practical understanding of how to measure aspects of molecular dynamics such as wave packet motion intramolecular vibrational relaxation and electron electron coupling and how to describe such measurements mathematically *Catalog of Copyright Entries.
