Zhai,Zhendong Jin,Chen Yang,Gang Tian,2024-06-04 The cellular signaling network refers to the complex system formed by the interactions between various signaling molecules and receptors within and between cells It consists of multiple signaling pathways that mediate intricate cellular interactions both internally and externally The development of cancer is closely associated with the intricate signaling transduction network within cells where multiple signaling pathways are

interconnected and collectively regulate the biological phenotypes of tumor cells **Characteristic clinical immune phenotypes and molecular mechanisms associated with inflammatory diseases, 2nd edition** Chengjin Gao,Shuming

Pan ,Kun Xiong,2024-11-06 The systemic inflammatory response is evident in inflammatory diseases and the immune system secretes many cytokines involved resulting in a robust immune response For example the pathogenesis of sepsis includes abnormal immune cell activation in the early stages as well as sepsis related immunosuppression During the immunosuppressive phase CD4 T cells CD8 T cells Th17 cells and d T cells are reduced while regulatory T cells increase At the same time T lymphocytes and neutrophils as immune effector cells interact with each other and play a key role in regulating the immune response to immune inflammatory diseases The increased release of neutrophil extracellular trap networks NETs by neutrophils leads to a significant upregulation of NETs DNA MPO which further aggravates the septic inflammatory response and organ functional impairment Therefore it is important to deeply investigate the characteristic clinical immune phenotypes and molecular mechanisms associated with inflammatory diseases and targeting therapies against them may provide new ideas for the precise treatment of diseases The goal of this Research Topic is to provide a forum to advance research on the contribution of the fundamental mechanisms of immune system development and function with special emphasis on the description and mechanism of clinical immunological phenotypes in different immune disorders and the definition of their molecular basis The Research Topic had the bullet points including but not limited to the following 1 Description of the immune phenotypes of various common acute and chronic diseases 2 The regulatory mechanisms of different factors on the development and function of the host immune system 3 Inflammatory immunological mechanisms organ function and interorgan interactions **New Science Discovery for Lower Secondary** Rex M.
