

SB1a Microscopes

Student Book

- 1 a** The photo shows the flea 50 times bigger than it really is.
- b** $5 / 50 = 0.1$ cm or 1 mm
- 2** $5 \times 5 = \times 25$; $5 \times 15 = \times 75$; $5 \times 20 = \times 100$
- 3** Bacterium = 8 mm long. Dividing 8 by 0.002 gives magnification of 4000. (Answers may vary, depending on accuracy of students' measurements.)
- 4** He could see points that were at least 0.002 mm apart as separate points, but points that were closer than this appeared as a single point.
- 5** They have a greater magnification and they have a greater resolution.
- 6** 0.0000002 mm = 0.0002 μ m or 0.2 nm or 200 pm

S1 Students should spot at least one similarity (e.g. they both have a barrel containing two lenses, they both have a focusing wheel, they both need a light source) and one difference (e.g. today's microscopes have bigger magnifications, have greater resolutions, are not made of the same materials). The essential point for students to understand is that greater magnifications and greater resolutions now allow us to examine things with much greater clarity and detail.

E1 The points around the edges of a diatom are at minimum 20 μ m or 0.02 mm away from each other and so can be seen with a microscope that has a resolution down to 0.0014 mm (1.4 μ m). However the pores are only 1 μ m (0.001 mm) in diameter and so cannot be seen with a microscope of this resolution.

Exam-style question

Two from the following:

- image has more clarity/is clearer
- more detail can be seen / greater resolution
- larger image can be seen / greater magnification

Activity and Assessment Pack

SB1a.1 Working with magnifications

- 1** Microscope
- 2 a** 1 mm $\times 20 = 20$ mm
- b** 1 mm $\times 50 = 50$ mm

- c** 1 mm $\times 150 = 150$ mm
- d** 1 mm $\times 1200 = 1200$ mm
- e** 1 mm $\times 0.5 = 0.5$ mm
- 3 a** 2 cm
- b** 5 cm
- c** 15 cm
- d** 120 cm
- e** 0.05 cm
- 4 a** 10 cm (100 mm). Make sure students have included the unit.
- b** $100 / 1$ (or $10 / 0.1$) = 100. The magnification is $\times 100$. The important point here is that students need to change one of the units so that both the measurement and the size of the water flea are in the same units.
- c** 60 mm / $100 = 0.6$ mm (or 6 cm / $100 = 0.06$ cm). Accept answers that have used an incorrect magnification from part b but are otherwise correct.
- 5** Length of offspring is 20 mm. $100 / 20 = 5$. The adult is 5 times bigger than the offspring.
- 6 a** 20 mm / 100 mm = 0.2 mm or 1 mm / 5 = 0.2 mm
- b** 0.2 mm = 0.002 m, 0.02 cm, 200 μ m, 200 000 nm, 200 000 000 pm

SB1a.2 Microscopes – Strengthen

- 1** The smallest distance between two points that can still be seen as two points.
- 2 a** Hooke's microscope: contains a barrel with two lenses, uses light, magnification up to $\times 30$, resolution down to 0.002 mm. Modern light microscope: contains a barrel with two lenses, uses light, magnification up to $\times 1500$, resolution down to 0.0001 mm.
- b** Microscopes, lenses, magnification, resolution
- 3** $20 \times 3 = \times 60$
- 4 a** Electron microscope
- b** It has a better/greater resolution.
- 5 a** 50 μ m
- b** 5 mm

SB1a.3 Microscopes – Extend

- 1 a** $100\ 000 / 100$ (or $10 / 0.01$) = 1000. The magnification is $\times 1000$. The important point here is that students need to change one of the units so that both the measurement on the worksheet and the size of the diatom are in the same units.

McComas, 2013-12-30 The Language of Science Education An Expanded Glossary of Key Terms and Concepts in Science Teaching and Learning is written expressly for science education professionals and students of science education to provide the foundation for a shared vocabulary of the field of science teaching and learning Science education is a part of education studies but has developed a unique vocabulary that is occasionally at odds with the ways some terms are commonly used both in the field of education and in general conversation Therefore understanding the specific way that terms are used within science education is vital for those who wish to understand the existing literature or make contributions to it The Language of Science Education provides definitions for 100 unique terms but when considering the related terms that are also defined as they relate to the targeted words almost 150 words are represented in the book For instance laboratory instruction is accompanied by definitions for openness wet lab dry lab virtual lab and cookbook lab Each key term is defined both with a short entry designed to provide immediate access following by a more extensive discussion with extensive references and examples where appropriate Experienced readers will recognize the majority of terms included but the developing discipline of science education demands the consideration of new words For example the term blended science is offered as a better descriptor for interdisciplinary science and make a distinction between project based and problem based instruction Even a definition for science education is included The Language of Science Education is designed as a reference book but many readers may find it useful and enlightening to read it as if it were a series of very short stories

Critical Voices in Science Education Research Jesse Bazzul,Christina Siry,2019-01-23 This book is a collection of narratives from a diverse array of science education researchers that elucidate some of the difficulties of becoming a science education researcher and or science teacher educator with the hope that through solidarity commonality and telling the story justice oriented science education researchers will feel more supported in their own journeys Being a scholar and teacher that sees science education as a space for justice and thinking being different entry into this disciplinary field often comes with tense moments and personal difficulties The chapter authors of this book break into many painful awkward and seemingly nebulous topics including the intersectional nuances of what it means to be a researcher in the contexts of epistemic rigidity white supremacy and neoliberal restructuring Of course these contexts become different depending on how teachers students and researchers are constituted within them as racialized sexed gendered disposable valued subjects

We hope that within these narratives readers will identify with similar struggles in terms of what it means to desire to do good in the world while facing subtle and not so subtle institutional personal cultural and political challenges

Johnstone Triangle Norman Reid, 2021-01-18 Chemistry is often seen as a difficult subject to understand This book focusses on the triangle model that Alex H Johnstone developed in the early 1980s Originally conceived in the

context of making chemistry more accessible to a wider range of learners the model has been applied in almost every area of education in chemistry at all stages of learning In looking at why chemistry is difficult there are two central questions Firstly does the problem relate to the nature of chemistry and secondly does it relate to the way humans gain understanding Both were found to be important and the answers to the two question were found to be connected The triangle model arose from sustained research into human learning The central finding from research is the critical role of working memory and the model rationalises so much evidence from chemistry education research as well as the repeated experiences of teachers of chemistry at all levels In order to understand chemistry it is essential to develop sound mental models of molecular reality It generates major implications for the way a chemistry curriculum should be constructed and the processes of teaching and learning in chemistry when the goal is focussed on understanding the key ideas Some of these implications are developed and pointers offered to more successful ways forward The power of the Johnstone Triangle lies in the way it offers clear directions for all involved in chemistry education It is hoped that this book will prove helpful to all involved in sharing the exciting story of the way humans have come to understand the molecular world one of the great examples of great human endeavour
