Guide to Understanding Math Education in Today's Schools Cathrine Kellison,Catherine Twomey Fosnot,2012-12-01

Mathematics education in the schools today often looks quite different to parents than what they remember from their past schooling Emphasis has shifted away from pencil paper arithmetic and drill to mental arithmetic and a deep understanding of number and operation as a foundation for algebra As a result of new standards children today are expected to write

mathematical arguments choose appropriate models analyze patterns and solve problems Some parents may be skeptical of the changes and create difficulties for schools trying to reform Pressure from these parents who are upset may lead a school to abandon reform efforts to meet the new standards Other parents are supportive of the changes but often feel inadequately prepared to help their children at home Many even suffer from math anxiety This book is designed to provide information to parents about the changes and why they have come about Secondly it provides much information about what parents can do at home to help their children be successful including a section on mental computation and its importance in today's world dominated by handheld digital devices The book and related DVD can also be beneficial to the home schooling market

Reading Problems Joyce Holt Jennings, JoAnne Schudt Caldwell, Janet W. Lerner, 2006 Would the world be a better place if human societies were somehow able to curb their desires for material goods Saleem Ali's pioneering book links human wants and needs by providing a natural history of consumption and materialism with scientific detail and humanistic nuance It argues that simply disavowing consumption of materials is not likely to help in planning for a resource scarce future given global inequality development imperatives and our goals for a democratic global society Rather than

suppress the creativity and desire to discover that is often embedded in the exploration and production of material goods which he calls the treasure impulse Ali proposes a new environmental paradigm one that accepts our need to consume treasure for cultural and developmental reasons but warns of our concomitant need to conserve In evaluating the impact of treasure consumption on resource rich countries he argues that there is a way to consume responsibly and alleviate global poverty
