Increasing Productivity and Efficiency in Online Teaching Dickenson, Patricia, 2016-05-19 Distance learning has become very popular in recent years making evident some of the problems inherent to online classes as they are today High attrition rates driven in part by student isolation and low satisfaction have plagued online courses For an online class to succeed it must be built upon engaging media and meaningful interaction Increasing Productivity and Efficiency in Online Teaching provides a reference

for educators in virtual classrooms and enumerates strategies to foster instructor engagement and support. Because co-construction of information opposed to rote memorization of disseminated facts engages students and develops critical thinking skills, online education must shift to reflect this. Drawing from learning theory, this publication focuses on the ways educators can shape their online classes to best suit their students and leave them with knowledge and course satisfaction. This book is recommended for researchers, developers, students of education, administrators, and online educators in all subject areas.

Teaching Science Online Dietmar Kennepohl, 2023-07-03. With the increasing focus on science education, growing attention is being paid to how science is taught. Educators in science and science-related disciplines are recognizing that distance delivery opens up new opportunities for delivering information, providing interactivity, collaborative opportunities, and feedback, as well as for increasing access for students. This book presents the guidance of expert science educators from the US and from around the globe. They describe key concepts, delivery modes, and emerging technologies and offer models of practice. The book places particular emphasis on experimentation, lab, and field work, as they are fundamentally part of the education in most scientific disciplines. Chapters include: Discipline methodology and teaching strategies in the specific areas of physics, biology, chemistry, and earth sciences; An overview of the important and appropriate learning technologies (ICTs) for each major science; Best practices for establishing and maintaining a successful course online; Insights and tips for handling practical components like laboratories and field work; Coverage of breaking topics including MOOCs, learning analytics, open educational resources, and m-learning; Strategies for engaging your students online.

Resurgent Julian Birkinshaw, John Fallon, 2025-07-17. A practical handbook examining how established businesses can use their unique advantages to fight back and win in a digital arena too often dominated by tech start-ups, disruptors, and unicorns. The big tech companies (Alphabet, Amazon, Apple, Meta, Microsoft) have had an enormous impact on our everyday lives. A new wave of start-ups in the tech sector has dominated the press and swallowed up huge amounts of investment. But what about those established companies in the traditional parts of the world's economies: from energy, industrial, and consumer goods to travel and health? They rarely get a mention. Everyone was talking about the disruptors, the start-ups, and the entrepreneurs, and not about the incumbents. This book is a call for a reality check. For at the core of our established companies are capabilities and qualities that remain highly relevant in the digital age. They are often market leaders for very good reasons: they know their customers and markets well, and they have great product, sales, and marketing expertise. They are operationally savvy and financially strong, with deep insights into areas of expertise that no one else has, giving them a unique advantage. John Fallon and Julian Birkinshaw have come to a clear conclusion: incumbents are not going quietly into that dark night. Organizations will need to jettison their analogue baggage and infrastructure and embrace digital transformation. They will survive, and they will prosper. And this shows how they are doing it.
