Lay, Judith McDonald, 2016 With traditional linear algebra texts the course is relatively easy for students during the early stages as material is presented in a familiar concrete setting However when abstract concepts are introduced students often hit a wall Instructors seem to agree that certain concepts such as linear independence spanning subspace vector space and linear transformations are not easily understood and require time to assimilate These concepts are fundamental to the study of linear algebra so students understanding of them is vital to mastering the subject This text makes these concepts more accessible by introducing them early in a familiar concrete \mathbb{R}^n setting developing them gradually and returning to them throughout the text so that when they are discussed in the abstract students are readily able to understand
