Woodward, Matthew Stoltzfus, 2023 Publishing the fifteenth edition of this text bespeaks an exceptionally long record of successful textbook writing We are appreciative of the loyalty and support the book has received over the years and we are mindful of our obligation to justify each new edition We begin our approach to each new edition with an intensive author retreat in which we ask ourselves the deep questions that we must answer before we can move forward What justifies yet another edition What is changing in the world not only of chemistry but with respect to science education and the qualities of the students we serve How can we help your students not only learn the principles of chemistry but also become critical thinkers who can think more like chemists The answers lie only partly in the changing face of chemistry itself The introduction of many new technologies has changed the landscape in the teaching of sciences at all levels The use of online

resources in accessing information and presenting learning materials has markedly changed the role of the textbook as one element among many tools for student learning Our challenge as authors is to maintain the text as the primary source of chemical knowledge and practice while at the same time integrating it with the new avenues for learning made possible by technology This book incorporates a number of technologies to improve pedagogy including use of computer based classroom tools such as Mastering Chemistry which is continually evolving to provide more effective means of testing and evaluating student performance while giving the student immediate and helpful feedback Video feedback for a select number of Exam Prep questions is also available in Mastering Chemistry which is new to this edition The Flipped Classroom Carl Reidsema, Lydia Kavanagh, Roger Hadgraft, Neville Smith, 2017-02-27 Teaching and learning within higher education continues to evolve with innovative and new practices such as flipped teaching This book contributes to the literature by developing a much deeper understanding of the complex phenomenon of flipped classroom approaches within higher education It also serves as a practical guide to implementing flipped classroom teaching in academic practice across different higher educational institutions and disciplines Part 1 of this book Practice describes the considerations involved in flipped classroom teaching including the challenges faced in transforming teaching and learning within higher education Further it reviews the educational concepts on which the flipped classroom is based including a selected history of similar innovations in the past The final sections of Part 1 explore the tools needed for flipping the design steps assessment methods and the role of reflective practice within flipped teaching environments p Part 2 of the book Practices provides a range of case studies from higher educational institutions in different countries and disciplines to demonstrate the many shapes and sizes of flipped classrooms Many of the challenges such as engaging students in their own learning and shifting them from spectators in the learning process to active participants prove to be universal MODIFIED PEARSON MASTERING CHEMISTRY WITH PEARSON ETEXT - INSTANT ACCESS - FOR CHEMISTRY KAREN.
