Introduction to Geochemistry Kula C. Misra, 2012-03-28
INTRODUCTION TO Geochemistry This book is intended to serve as a text for an introductory course in geochemistry for undergraduate and graduate students with at least an elementary level background in earth sciences, chemistry, and mathematics. The text, containing 83 tables and 181 figures, covers a wide variety of topics ranging from atomic structure to chemical and isotopic equilibria to modern biogeochemical cycles, which are divided into four interrelated parts: Crystal Chemistry, Chemical Reactions, and biochemical reactions involving bacteria, Isotope Geochemistry (radiogenic and stable isotopes), and The Earth Supersystem, which includes discussions pertinent to the evolution of the solid Earth, the atmosphere, and the hydrosphere. In keeping with the modern trend in the field of geochemistry, the book emphasizes computational techniques by developing appropriate mathematical relations, solving a variety of problems to illustrate application of the mathematical relations, and leaving a set of questions at the end of each chapter to be solved by students. However, so as not to interrupt the flow of the text, involved chemical concepts and mathematical derivations are separated in the form of boxes. Supplementary materials are packaged into ten appendixes that include a standard state 298.15 K, 1 bar thermodynamic data table and a listing of answers to selected chapter-end questions.

The Burning Answer Keith Barnham, 2015-05-15 Our society faces a choice. We could be enjoying a sustainable lifestyle but we have chosen not to. In three generations we have consumed half the oil produced by photosynthesis over eight million generations. In two generations we have used half our uranium resources. With threats from global warming, oil depletion, and nuclear disaster, we are running out of options. Solar power, as Keith Barnham says, is our necessary solution. Barnham explains that the roots of solar energy lie in a little-known equation, $E = hf$, an equation which was coincidentally celebrated and explained to the world by Einstein in the same year he discovered $E = mc^2$. He alleges that the former equation has been overlooked in favor of the latter, much to our detriment, and Barnham is here to offer us a solution. We can still turn things around, and solar energy is the key. In this provocative, inspiring, passionately argued book, Keith Barnham outlines actions that any one and all of us can take to make an impact now and on future generations. *The Burning Answer* is a solar manifesto for the new climate-aware generation and a must-read for climate change skeptics. *Iit Foundations - Physics Class 10* Pearson, 2009-09 IIT Foundation series is specifically for students preparing for IIT right from school days.
