## Crocodile tears

People who fake being sad are often said to be 'crying crocodile tears'. A scientific study recently discovered the reason for this metaphor. When crocodiles eat, air is

forced through holes in their skulls and out through their eyes causing them to weep. This makes the animals look as though they feel sorry for killing and eating their

prey (when of course, they're not). Crocodiles have their eyes, ears and nostrils on the tops of their heads, so that they can lie low in the water as they wait to attack.
