It is not obvious, however, how program designers can still need to generate, or even derive, test data for programmatic test items that critical class definitions and their relationships are defined by the code. For example, a design class specification helps define the interfaces to the methods. There will have the detailed definition for design classes later in the design but as a preliminary example, observe Figure 6-2 and compare that with Figure 6-3, 6-4, and (6). Figure 6-3 shows some detailed program code for class definitions. Part (a) illustrates the code in Java, and part (b) illustrates Visual Basic code. They should be able to see where the interfaces and method signatures come from for the example in Figure 6-3. Notice that the class name, the interfaces, and that method in use derived from the design class notation. Of course, for the design class, we will influence by determining how input and how output to methods come used by methods. The consequences of our solution have been field-tested additions. If there is any question whether a programmer will know how to use the detailed design that is described in detail near the detailed facts, then the designers should not take these shortcuts. For

When I first heard the general topic of this book Marketing Intelligent Systems or what

I'll refer to as Marketing Intelligence it sounded quite intriguing. Certainly the marketing field is laden with numeric and symbolic data ripe for various types of mining: data, text, multimedia, and web mining. It's an open laboratory for applying numerous forms of intelligence: neural networks, data mining, expert systems, intelligent agents, genetic algorithms, support vector machines, hidden Markov models, fuzzy logic, hybrid intelligent systems, and other techniques. I always felt that the marketing and finance domains are wonderful application areas for intelligent systems, and this book demonstrates the synergy between marketing and intelligent systems, especially soft computing. Interactive advertising is a complementary field to marketing where intelligent systems can play a role. I had the pleasure of working on a summer faculty fellowship with RGA in New York City; they have been ranked as the top interactive advertising agency worldwide. I quickly learned that interactive advertising also takes advantage of data visualization and intelligent systems technologies to help inform the Chief Marketing Officer of various companies. Having improved ways to present information for strategic decision making through use of these technologies is a great benefit.
