frontiersin.org/about/contact *Protein Interaction Networks in Health and Disease* Spyros Petrakis, Miguel A. Andrade-Navarro, 2016-10-19 The identification and mapping of protein-protein interactions (PPIs) is a major goal in systems biology. Experimental data are currently produced in large scale using a variety of high throughput assays in yeast or mammalian systems. Analysis of these data using computational tools leads to the construction of large protein interaction networks which help researchers identify novel protein functions. However, our current view of protein interaction networks is still limited and there is an active field of research trying to further develop this concept to include important processes: the topology of interactions and their changes in real time; the effects of competition for binding to the same protein region; PPI variation due to alternative splicing or post-translational modifications etc. In particular, a clinically relevant topic for development of the concept of protein interaction networks is the consideration of mutant isoforms which may be responsible for a pathological condition. Mutations in proteins may result in loss of normal interactions and appearance of novel abnormal interactions that may affect a protein's function and biological cycle. This Research Topic presents novel findings and recent achievements in the field of protein interaction networks with a focus on disease. Authors describe methods for the identification and quantification of PPIs; the annotation and analysis of networks considering PPIs and protein complexes formed by mutant proteins associated with pathological conditions or genetic diseases.

International Scientific Conference Energy Management of Municipal Transportation Facilities and Transport EMMFT 2017 Vera Murgul, Zdenka Popovic, 2017-12-19 This book includes the proceedings of the 19th International Scientific Conference Energy Management of Municipal Transportation Facilities and Transport EMMFT 2017 which was held in Khabarovsk, Russia, on 10-13 April 2017. The book presents the research findings of scientists working at universities in the Far Eastern Siberian and Ural Federal Districts of Russia and of Serbia, which are unique regions notable for sustainably operating complex transport infrastructures in severe climatic and geographic environments. It also offers practical insights into transportation operation under such conditions. The book discusses the experiences of colleagues from Slovenia, Ukraine, and Latvia in the development of transport infrastructure and construction of transport facilities and features and includes the results of a wide range of studies such as managing multimodal transportation, improving the efficiency of locomotives, electric locomotives, traction substations, electrical substations, relay protection and automation devices, and power factor correction units. It addresses topics like renewable energy sources, problems of the mathematical and simulation modelling of electromagnetic processes of electrical power objects and systems, aspects of cost reduction for fuel and power resources, theoretical aspects of energy management, development of transport infrastructure, modern organizational and technological solutions in construction, new approaches in the field of management analysis and monitoring in transport sector. Comprising 142 high quality articles covering a wide range of topics, these proceedings are of interest to anyone engaged in transport engineering, electric power systems, energy management, construction and operation of transport infrastructure, buildings and

facilities

Exploring Evidence for Neurorehabilitation Advancements Hideki Nakano,Masahiro Sakita,Kosuke

Oku,Tomotaka Ito,Akiyoshi Matsugi,2025-08-12 Neuroscience based rehabilitation is called neurorehabilitation Specifically neurorehabilitation is defined as concepts evaluation methods treatments and equipment that apply brain theories and other findings revealed by neuroscience and related research to rehabilitation Physical dysfunction including central nervous system disease alters the body s representation in the brain resulting in stagnation of motor function recovery Therefore neuroscience based rehabilitation is essential to reconstruct the altered body representation in the brain However the evidence for neurorehabilitation is still insufficient and it is critical to build upon this evidence to provide optimal rehabilitation and maximize motor function recovery Many fundamental studies on neuroplasticity motor control and motor learning theory brain function measurement non invasive brain stimulation and advanced technologies such as brain machine interface AI and regenerative medicine have been reported in recent years The integration of neuroscience and cutting edge research related to neuroscience has excellent potential to contribute to the development of neurorehabilitation

Molecular mechanisms of cellular stress responses in cancer and their therapeutic

implications Megan Chircop,Daniel Speidel,2015-03-06 In response to stress cells can activate a myriad of signalling pathways to bring about a specific cellular outcome including cell cycle arrest DNA repair senescence and apoptosis This response is pivotal for tumour suppression as all of these outcomes result in restriction of the growth and or elimination of damaged and pre malignant cells Thus a large number of anti cancer agents target specific components of stress response signalling pathways with the aim of causing tumour regression by stimulating cell death However the efficacy of these agents is often impaired due to mutations in genes that are involved in these stress responsive signalling pathways and instead the oncogenic potential of a cell is increased leading to the initiation and or progression of tumourigenesis Moreover these genetic defects can increase or contribute to resistance to chemotherapeutic agents and or radiotherapy Modulating the outcome of cellular stress responses towards cell death in tumour cells without affecting surrounding normal cells is thus one of the ultimate aims in the development of new cancer therapeutics To achieve this aim a detailed understanding of cellular stress response pathways and their aberrations in cancer is required This Research topic aims to reflect the broadness and complexity of this important area of cancer research

Cinnamon Ranjith Senaratne,Ranjith Pathirana,2021-01-25

Cinnamon is the common name for the spice obtained from the dried inner bark of several species of the genus *Cinnamomum* in the Lauraceae family In world trade *Cinnamomum cassia* L J Presl *Cinnamomum burmannii* dominate but it is of a different quality to true or Ceylon cinnamon produced from *Cinnamomum zeylanicum* Blume C verum J Presl with the latter much easier to process giving a more delicate sweeter flavor with nuances of clove but more importantly with only traces often

below detection thresholds of coumarin compared with 5-7 g/kg in other species. Cinnamon has been a popular and expensive spice in many civilizations including ancient Egypt, Rome, and in 14th and 15th century Europe where it was used primarily to preserve meat for its antibacterial properties, fine aroma, and flavor. Ancient Egyptians used cinnamon in mummification process due to its antibacterial properties and fragrance. The quest for cinnamon brought many explorers to Ceylon whose ancient history is intertwined with the cinnamon trade. Ancient Egyptians and Romans used cinnamon as a valued spice and as an incense. In recent years, much research has been conducted in crop improvement, processing, and value addition in cinnamon. In addition to direct use as a condiment, spice, cinnamon has found a multitude of uses in the food and beverage, traditional medicine, pharmacology, nutraceutical, and cosmetics industries. Ceylon cinnamon is unique in that oils distilled from the bark, major constituents are cinnamaldehyde and oleoresins; leaf eugenol is the major constituent used in dentistry, perfumes, flavorings, and as an antioxidant; and roots, camphor, have different industrial uses. Cinnamaldehyde is now a proven natural bactericide widely used in food and beverage industry, effective against *Salmonella* spp and *Escherichia coli*. Thus, it has become an important natural component of organic fruit and vegetable juices to enhance microbial safety of these nutritious beverages. Because of its manifold uses, cinnamon is an important crop. There have been many recent publications on its ethnobotany, genetics, crop improvement, agronomy, processing, biotechnology, chemistry, food and medicinal uses, and industrial applications. However, one book condensing all these findings is lacking. Our publication, with chapters devoted to all these aspects of cinnamon, written by experts in these fields, condenses current knowledge into a single source and contributes to the advancement and dissemination of knowledge and technology. Contributors to the book constitute internationally renowned senior scientists and academics with hands-on experience, as well as movers and shakers of industry, thereby striking a right balance between theory and practice. Therefore, it is a valuable source for students, teachers, scientists, planners, policy makers, practicing agriculturists, and industrialists, and a prized acquisition to any library in higher education institutions, R & D institutions, and public and private sector institutions in agriculture and allied fields.

Genetic Counseling for Adult Neurogenetic Disease Jill S. Goldman, 2014-12-01

The adult patient diagnosed with or at risk for a neurogenetic disease has many questions and concerns for the genetic counselor, the neurologist, and other practitioners. Because of the emotional and potentially life-altering impact of these diseases on the patient and family, counseling can be especially challenging. A rare, hands-on guide to the subject, *Genetic Counseling for Adult Neurogenetic Disease* deals with core issues that differentiate adult neurogenetic counseling from its more familiar pediatric counterpart. This innovative book, with accompanying videos, is designed to fill in deficits in this area, typical of training programs in genetic counseling which have pediatrics and prenatal concentrations and neurology, which rarely cover genetic counseling.

For each condition featured chapters include a detailed overview of genetic symptoms diagnostic criteria and management plus guidelines for asking and answering pertinent questions The major concentration however is on genetic counseling issues and case histories illustrating these issues As an added dimension the accompanying videos depict representative issues and challenges in genetic counseling for specific diseases in addition to the basics of a neurological examination Among the conditions discussed Movement disorders including Parkinson s disease Dementias including Alzheimer s disease Stroke Motor neuron diseases Neuropathies and channelopathies Adult muscular dystrophies Neurocutaneous syndromes Plus a section on neurological and neuropsychological evaluation This is information that will stay relevant as technologies change and genetic understanding evolves Genetic Counseling for Adult Neurogenetic Disease offers advanced clinical wisdom for genetic counselors as well as neurologists neuropsychologists and other referring clinicians *Behavioral Genetics of the Fly (Drosophila Melanogaster)* Josh Dubnau,2014-06-26 A comprehensive portrayal of the behaviour genetics of the fruit fly *Drosophila melanogaster* and the methods used in these studies *Science* John Michels (Journalist),2002
