50 Fantastic Ideas for Engaging Dads June O'Sullivan, Alice Sharp, 2018-11-01 The 50 Fantastic Ideas series is packed full of fun original skills based activities for Early Years practitioners to use with children aged 0-5. Each activity features step by step guidance, a list of resources and a detailed explanation of the skills children will learn. Creative, simple and highly effective, this series is a must have for every Early Years setting. Children benefit from the sensitive and supportive engagement of both their parents from the earliest of ages, but involving dads can be challenging. This book is designed to provide simple and accessible activities for practitioners looking to engage dads. Both June and Alice work with dads on a daily basis, helping them to understand their contribution to their children's development and longer term educational success. Realising how they can add to what the mums or other carers do in a different but complementary way and how simple activities can enrich their children's lives helps strengthen the bond between father and child. Each simple but effective idea in this book has been developed and written with the intention of promoting child and family well-being, helping both children and families grow together.

Mindset Mathematics: Visualizing and Investigating Big Ideas, Grade 2 Jo Boaler, Jen Munson, Cathy Williams, 2021-12-10 Engage students in mathematics using growth mindset techniques. The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low-floor, high-ceiling tasks that will help you do just that by looking at the big ideas in second grade through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message: that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed **Mindset Mathematics** around the principle of active student inquiry with tasks that reflect the latest brain science on learning. Open, creative, and visual math tasks have been shown to support student learning and, more importantly, change their relationship with mathematics and start believing in their own potential. The tasks in **Mindset Mathematics** reflect the lessons from brain

science that There is no such thing as a math person and anyone can learn mathematics to high levels Mistakes struggle and challenge are opportunities for brain growth Speed is unimportant and even counterproductive in mathematics Mathematics is a visual and beautiful subject and our brains want to think visually about mathematics With engaging questions open ended tasks and four color visuals that will help kids get excited about mathematics Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards CCSS and can be used with any current curriculum
