Clary,1988-12-01 Nearly one quarter of America is covered with forests almost 800 million acres There are 151 national forests comprising close to 200 million acres in thirty nine states and Puerto Rico These protected lands are administered by the U S Forest Service an agency of the Department of Agriculture David Clary here examines the history of and controversies surrounding the Forest Service s policies for timber management in our national forests In this first in depth study of the political bureaucratic social and ideological relationships between the Forest Service and the production of timber Clary traces the continuity in the agency s outlook from its creation in 1905 through fears of a timber famine to the clear cutting controversies of the mid 1970s He shows convincingly that despite legislative remedies and agency reports timber production has remained the agency s first priority and that other multiple uses recreation watershed protection wilderness livestock grazing and wildlife management were regulated so that they would not interfere with potential timber harvests Throughout its history the agency is shown to have been enchanted with the objective of producing timber Clary s theme in what he describes as an administrative political scientific and anecdotal history is that the Forest Service exhibited consistent actions and attitudes over the years and failed to confront realistically changes in the national culture that altered what the American people wanted from the forests and the Forest Service Catalog of Copyright Entries. Linskens, John F. Jackson, 2013-03-09

Modern Methods of Plant Analysis When the handbook Modern Methods of Plant Analysis was first introduced in 1954 the considerations were 1 the dependence of scientific progress in biology on the improvement of existing and the introduction of new methods 2 the difficulty in finding many new analytical methods in specialized journals which are normally not accessible to experimental plant biologists 3 the fact that in the methods sections of papers the description of methods is frequently so compact or even sometimes so incomplete that it is difficult to reproduce experiments These considerations still stand today The series was highly successful seven volumes appearing between 1956 and 1964 Since there is still today a demand for the old series the publisher has decided to resume publication of Modern Methods of Plant Analysis It is hoped that the New Series will be just as acceptable to those working in plant sciences and related fields as the early volumes undoubtedly were It is difficult to single out the major reasons for the success of any publication but we believe that the methods published in the first series were up to date at the time and presented in a way that made description as applied to plant material complete in itself with little need to consult other publications Contribution authors have attempted to follow these guidelines in this New Series of volumes Editorial The earlier series of Modern Methods of Plant Analysis was initiated by Michel V Grand Mesa National Forest (N.F.), Uncompahgre National Forest (N.F.),
