the impacts of anthropogenic activity on ecosystems and thus on species conservation Its goal is to improve assessments of the impacts of human activity on the environment We are aware that prognoses have very often proven to be false It is difficult to impossible to be able to predict with precision how evolution and ecosystems will change in future under anthropogenic influence This strengthens our resolve to attempt to retain the highest possible degree of scientific integrity and professionalism and not to shy away from expressing the uncertainty of our own ideas and prognoses We venture prognoses in this book and we will fail However we hope that we will be wrong on the right side
