Safety information

Warning! Read the following information carefully before installing the lens and make sure that any person who uses, services, installs or transports the fixture and lens also has this information.

Warning! Follow all the safety precautions in the fixture's user documentation and use the documentation for reference when installing accessories and using the modified product. Safety and Installation guides are supplied with fixtures, but check that you have the latest revision of the user documentation. This is available for download from the fixture's Product Support page at www.martin.com

Warning! Accessories must be installed by qualified professional technicians only.

Warning! Disconnect the fixture from power and allow to cool for at least 30 minutes before starting work.

Warning! With the Beam Kit installed on a MAC Viper AirFX, do not illuminate surfaces within 4.2 m (13.8 ft.).

Warning! The MAC Viper AirFX Beam Kit increases the length of the fixture's head. There is a risk of head collision and a danger of falling objects if the instructions in this guide are not followed carefully. In particular:

- Before installing the Beam Kit, check that the fixture is running firmware version 1.3.0 or later and check that the head is perfectly vertical when tilt is set to 0°. If necessary, update the fixture's firmware and calibrate the head in the control menu as directed in the MAC Viper AirFX user documentation.
- Do not apply power to a fixture with a Beam Kit installed if the Beam Kit's connector is not plugged into its socket in the fixture's head.
- Remove any oversize XLR connectors such as 3-pin to 5-pin XLR adapters from the DMX sockets.
- Remove the Beam lens before opening the Tilt calibration menu in the control panel.
