are turning our notion of the evolutionary tree of life on its head amazingly they represent perhaps a full third of earth's genetic diversity As Wolfe explains creatures of the soil can work for us by providing important pharmaceuticals and recycling the essential elements of life or against us by spreading disease and contributing to global climate change The future of our species may well depend on how we manage our living soil resources Tales from the Underground will forever alter our appreciation of the natural world around and beneath us *Proceedings of the Annual Meeting of the Association*
