Peaceful Persuasion Ellen W. Gorsevski, 2004-03-18 Offers a conceptual foundation for nonviolent rhetoric

Teacher Education and Human Rights Audrey Osler, Hugh Starkey, 2017-11-01 Teaching has been described as a hazardous profession and teacher educators are faced with a challenging task in preparing teachers for the future Human rights are high on the international agenda but also have direct implications for teachers and students in the classroom Originally published in 1996 this book brings together teacher education and human rights to examine how we might best educate children and young people for citizenship Drawing on case studies from the UK Europe and internationally the

authors provide practical suggestions for ways in which teachers can increase young people's awareness of the importance of securing their rights and those of others in the community. Looking particularly at how teachers might challenge injustice, racism and xenophobia, they examine human rights as a basis for educational policies and discuss how international human rights instruments can be incorporated into the teacher education curriculum. The book will benefit teacher trainers, teachers and education policy makers concerned with race, gender and special needs, undergraduate and postgraduate student teachers and educational researchers.

Human Rights Makau Mutua, 2013-07-03 In 1948 the United Nations adopted the Universal Declaration of Human Rights and with it a profusion of norms, processes and institutions to define, promote and protect human rights. Today virtually every cause seeks to cloak itself in the righteous language of rights. But even so, this universal reliance on the rights idiom has not succeeded in creating common ground and deep agreement as to the scope, content and philosophical bases for human rights. Makau Mutua argues that the human rights enterprise inappropriately presents itself as a guarantor of eternal truths without which human civilization is impossible. Mutua contends that in fact the human rights corpus, though well meaning, is a Eurocentric construct for the reconstitution of non-Western societies and peoples with a set of culturally biased norms and practices. Mutua maintains that if the human rights movement is to succeed, it must move away from Eurocentrism as a civilizing crusade and attack on non-European peoples. Only a genuine multicultural approach to human rights can make it truly universal. Indigenous non-European traditions of Asia, Africa, the Pacific and the Americas must be deployed to deconstruct and to reconstruct a universal bundle of rights that all human societies can claim as theirs.

A Complex Integral Realist Perspective Paul Marshall, 2016-07-01 This book sketches the contours of a vision that moves beyond the dominant paradigm or worldview that underlies and governs modernity and postmodernity. It does so by drawing on the remarkable leap in human consciousness that occurred during the Axial Age and on a cross-pollination of what are arguably the three most comprehensive integrative metatheories available today: Complex thought, integral theory and critical realism, i.e. a complex integral realism. By deploying the three integrative metatheories, this book recounts how the seeds of a number of biases within the Western tradition—analytical over dialectical epistemology, over ontology, presence over absence and exterior over interior—were first sown in axial Greece, later consolidated in European modernity and then challenged throughout the 20th century. It then discusses the remedies provided by the three integrative philosophies, remedies that have paved the way for a new vision. Outlining a new axial vision for the twenty-first century which integrates the best of premodernity, modernity and postmodernity within a complex integral realist framework, this book will be of interest to students and scholars of the Axial Age, critical realism, integral theory and complex thought. It will also appeal to those interested in a possible integration of the insights and knowledge gleaned by science, spirituality and philosophy.

Public Commissions on Cultural and Religious Diversity Solange Lefebvre, Patrice Brodeur, 2017-05-08 Due to growing negative perceptions about relations between historically entrenched dominant populations and various minority

groups issues relating to the need to better manage cultural and religious diversity have been intensifying in many countries. These negative perceptions have recently led to a significant increase in popular support for right and extreme right nationalist discourses and have created so much public tension that national governments have had no choice but to respond. In the last two decades in several Western contexts in particular the issues raised by such combined challenges have culminated in the creation of government initiated or private national commissions. This book presents the results of a multidisciplinary analysis from a broader framework that includes the national public commissions which have addressed the challenges of managing cultural and religious diversity in Belgium, Britain, Canada, Quebec, France, Morocco and Norway including also other cases of public management in Australia and Singapore. It includes in depth studies of the issues and controversies examined by each of the commissions such as the ways they perceived the issues, their results and impact, the key political players involved, the media debates and reception surrounding each commission, the communication strategies and difficulties their leaders encountered as well as the legal aspects each commission has raised. The reports represent a rich body of work charting the fundamental questions nations face about their nature, history and future while the impact on peoples lives tells us much about different approaches to the issues of cultural identity between countries.

The Universal Declaration of Human Rights and the Challenge of Religion Johannes Morsink, 2017-08-03. Repulsed by evil Nazi practices and desiring to create a better world after the devastation of World War II in 1948 the UN General Assembly adopted the Universal Declaration of Human Rights (UDHR). Because of the secular imprint of this text it has faced a series of challenges from the world's religions both when it was crafted and in subsequent political and legal struggles. The book mixes philosophical, legal and archival arguments to make the point that the language of human rights is a valid one to address the world's disputes. It updates the rationale used by the early UN visionaries and makes it available to twenty first century believers and unbelievers alike. The book shows how the debates that informed the adoption of this pivotal normative international text can be used by scholars to make broad and important policy points.

Natural Human Rights Michael Boylan, 2014-08-11. This timely book by internationally regarded scholar of ethics and social political philosophy Michael Boylan focuses on the history, application and significance of human rights in the West and China. Boylan engages the key current philosophical debates prevalent in human rights discourse today and draws them together to argue for the existence of natural universal human rights. Arguing against the grain of mainstream philosophical beliefs, Boylan asserts that there is continuity between human rights and natural law and that human beings require basic essential goods for minimum action. These include food, clean water and sanitation, clothing, shelter and protection from bodily harm including basic healthcare. The achievement of this goal, Boylan demonstrates, will require significant resource allocation and creative methods of implementation involving public and private institutions. Combining technical argument with four fictional narratives about human rights, the book invites readers to engage with the most important aspects of the discipline.

History of Western

Philosophy from a Perspective of Quantum Theory Shiro ISHIKAWA, 2023-05-22 Recently I proposed Quantum Language QL as a language of dualistic and idealistic science which is also characterized as a linguistic turn of quantum mechanics QL has two subclasses non commutative QL and commutative QL They are applicable to quantum systems and to classical systems respectively QL is composed of Axiom 1 measurement Axiom 2 causality and the linguistic Copenhagen interpretation This theory has a stronger descriptive power than quantum mechanics and statistics Axioms 1 and 2 are usual since they are operator algebraic generalizations of quantum mechanics On the other hand the part of linguistic Copenhagen interpretation is not usual This is defined by a rule for drawing a line between science and pseudoscience For example the Popper s falsifiability is one of the rules of the linguistic Copenhagen interpretation Other examples are 1 There exists only one and not many due to Parmenides Measurement can only be done once A state does not move 2 There is no motion due to Parmenides A state does not move 3 There is only the present due to Augustinus There is no tense 4 To be is to be perceived due to Berkely Nothing can be said without measurement It is surprising that philosophers who did not know quantum mechanics approached the Copenhagen interpretation as described above Thus I consider that the Copenhagen Interpretation is not attached to quantum mechanics but to quantum language I will show that QL is a scientific perfection of dualistic idealism in Western philosophy In fact the following unsolved problems in Western philosophy can be solved only by QL not by statistics Zeno paradoxes the problem of universals Descartes problem mind body problem subjectivity problem the Leibniz Clarke space time correspondence Hume s problem of induction the Grue paradox From Kantian synthesis to QL synthesis the brain in a vat Hempel s flagpole problem the black raven problem Wittgenstein s problem Why does logic work in our world etc The most fundamental theories in modern science are commonly said to be the three theory of relativity quantum mechanics and statistics However as this book will show commutative QL is more powerful and beautiful than statistics Therefore I would replace the above three by theory of relativity quantum mechanics and commutative QL
