Abstract: This study examined the effects of a 12-week, 100% bodyweight resistance training program on the strength and body composition of 12 sedentary, middle-aged men. The program was designed to improve muscular strength and endurance, and to reduce body fat. The program consisted of three sessions per week, each lasting 45 minutes. The first session was a warm-up, followed by a circuit of 10 exercises. The second session was a strength training session, and the third session was a cardiovascular session. The program was evaluated using a variety of measures, including strength, endurance, and body composition.
