World Economic Forum Global Information Technology Report:

The Global Information Technology Report 2004-2005 A. López-Claros, F. Paua, Soumitra Dutta, Bruno Lanvin, 2005-03-10

The use and application of ICT continues to be an important factor driving economic growth. The World Economic Forum in collaboration with INSEAD is pleased to announce the release of its fourth edition of the annual Global Information Technology Report, a comprehensive tool for measuring the progress of and identifying the obstacles to ICT development in over 100 countries worldwide. The Networked Readiness Index of the report provides the most comprehensive assessment of how prepared an economy is to capture the benefits of technology to promote economic growth and productivity. This study explicitly considers the roles played by the major stakeholders: individuals, businesses, and governments in relation to three dimensions: the environment for the development and use of ICT; the readiness of stakeholders to leverage the potential of ICT; and the degree of usage of ICT. The selection of essays, detailed country profiles for 104 economies, and data tables on 70 different ICT indicators presented in the report provide a useful guide for the design and structure of policy measures for the key ICT stakeholders: individuals, businesses, and governments in order to capture the benefits of ICT. **The Global Digital**

Divides James B. Pick, Avijit Sarkar, 2015-04-15 This book analyzes extensive data on the world's rapidly changing and growing access to use and geographies of information and communications technologies. It studies not only the spatial differences in technology usage worldwide but also examines digital differences in the major world nations of China, India, the United States, and Japan at the state and provincial levels. At the global level, factors such as education, innovation, judicial independence, and investment are important to explaining differences in the adoption and use of technology. The country studies corroborate consistent determinants for technology usage: for education, urban location, economic prosperity, and infrastructure; but also reveal unique determinants such as social capital in the United States and India, exports in China, and working age population and patents in Japan. Spatial patterns are revealed that indicate clusters of high and low technology use for various nations around the world, the countries of Africa, and for individual states/provinces within nations. Based on theory, novel findings, and phenomena that have remained largely unreported, the book considers the future of the worldwide digital divide, the policy role of governments, and the challenges of leadership. *The Infrastructured State* Colin

Turner, 2020-02-28 At the core of the logic of this book is that states engage in infrastructuring as a means of securing and enhancing their territoriality. By positioning infrastructure as a system, there is a presumption that all infrastructures exhibit some degree of mutual dependence. As such, a National Infrastructure System (NIS) is not simply about conventional conceptions of infrastructure based on those that support economic activity, i.e. energy, transport, and information, but also about broader hard and soft structures that both enable and are supported by the aforementioned economic infrastructures. Consequently, this book offers an ambitious holistic view on the form of NIS, arguing that the infrastructural mandate requires a conception of the state that encapsulates themes from both the competition and the welfare states in infrastructure.
