## **The African Wild Dog Behavior Ecology And:**

**The African Wild Dog** Scott Creel, Nancy Marusha Creel, 2019-12-31 With only 5 000 surviving the African wild dog *Lycaon pictus* is one of the world's most endangered large carnivores and one of the most remarkable. This comprehensive portrait of wild dogs incorporates previously scattered information with important new findings from a six year study in Tanzania's Selous Game Reserve Africa's largest protected area. The book emphasizes ecology concentrating on why wild dogs fare poorly in protected areas that maintain healthy populations of lions hyenas or other top carnivores. In addition to conservation issues it covers fascinating aspects of wild dog behavior and social evolution. The Creels use demographic behavioral endocrine and genetic approaches to examine how and why nonbreeding pack mates help breeding pairs raise their litters. They also present the largest data set ever collected on mammalian predator-prey interactions and the evolution of cooperative hunting allowing them to account for wild dogs' prowess as hunters. By using a large sample size and sophisticated analytical tools the authors step well beyond previous research. Their results include some surprises that will cause even specialists to rethink certain propositions such as the idea that wild dogs are unusually vulnerable to infectious disease. Several findings apply broadly to the management of other protected areas. Of clear appeal to ecologists studying predation and cooperation in any population this book collects and expands a cache of information useful to anyone studying conservation as well as to amateurs intrigued by the once maligned but extraordinary wild dog. **The African Wild Dog** J. D. Murdoch, M. S. Becker, 2002 Discusses the African wild dog including its physical characteristics habitat and behavior.

**The Behavior and Ecology of the African Wild Dog (*Lycaon Pictus*) in the Kruger National Park** Allen Reich, 1981 *The Behavior and Ecology of the African Wild Dog (*Lycaon Pictus*) in the Kruger National Park* A. Reich, 1984

**Social Strategies of Carnivorous Mammalian Predators** Mridula Srinivasan, Bernd Würsig, 2023-09-18 The book offers a comparative look at the social strategies of five carnivorous social predators four terrestrial and one marine that make them successful hunting units. The focus is on mammalian predators hunting largely mammalian prey. Each chapter with separate authors devoted to a particular species explores the versatile hunting techniques and social dynamics of these top predators as they attempt to survive defend and reproduce in challenging habitats. Each chapter also delves into how the social fabric and ecology of each species influence their ability to deal with natural and man-made threats and shifting baselines.

**Behavioral Ecology of Tropical Animals** Regina H. Macedo, 2010-11-15 *Advances in the Study of Behavior* was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior. That number is still expanding. This thematic volume makes another important contribution to the development of the field by bringing together material that aggregates studies conducted on the behavior of tropical animals. *Advances in the Study of Behavior* is now available online at ScienceDirect full text online from volume 30 onward. **Conserving Africa's**

**Mega-Diversity in the Anthropocene** Joris P. G. M. Cromsigt, Sally Archibald, Norman Owen-Smith, 2017-03-02 This book

synthesises key insights from a century of ecological research and monitoring efforts in one of Africa's oldest protected areas

**Long-Term Field Studies of Primates** Peter M. Kappeler, David P. Watts, 2012-01-07 Some primate field studies have been on going for decades covering significant portions of individual life cycles or even multiple generations In this volume leading field workers report on the history and infrastructure of their projects in Madagascar Africa Asia and South America More importantly they provide summaries of their long term research efforts on primate behaviour ecology and life history highlighting insights that were only possible because of the long term nature of the study The chapters of this volume collectively outline the many scientific reasons for studying primate behaviour ecology and demography over multiple generations This kind of research is typically necessitated by the relatively slow life histories of primates Moreover a complete understanding of social organization and behaviour factors often influenced by rare but important events requires long term data collection Finally long term field projects are also becoming increasingly important foci of local conservation activities

**Animal Social Complexity** Frans B. M. De Waal, Peter L Tyack, 2009-06-01 For over 25 years primatologists have speculated that intelligence at least in monkeys and apes evolved as an adaptation to the complicated social milieu of hard won friendships and bitterly contested rivalries Yet the Balkanization of animal research has prevented us from studying the same problem in other large brained long lived animals such as hyenas and elephants bats and sperm whales Social complexity turns out to be widespread indeed For example in many animal societies one individual's innovation such as tool use or a hunting technique may spread within the group thus creating a distinct culture As this collection of studies on a wide range of species shows animals develop a great variety of traditions which in turn affect fitness and survival The editors argue that future research into complex animal societies and intelligence will change the perception of animals as gene machines programmed to act in particular ways and perhaps elevate them to a status much closer to our own At a time when humans are perceived more biologically than ever before and animals as more cultural are we about to witness the dawn of a truly unified social science one with a distinctly cross specific perspective

**Mammal Societies** Tim Clutton-Brock, 2016-04-20 The book aims to integrate our understanding of mammalian societies into a novel synthesis that is relevant to behavioural ecologists ecologists and anthropologists It adopts a coherent structure that deals initially with the characteristics and strategies of females before covering those of males cooperative societies and hominid societies It reviews our current understanding both of the structure of societies and of the strategies of individuals it combines coverage of relevant areas of theory with coverage of interspecific comparisons intraspecific comparisons and experiments it explores both evolutionary causes of different traits and their ecological consequences and it integrates research on different groups of mammals with research on primates and humans and attempts to put research on human societies into a broader perspective

**Advances in the Study of Behavior** H. Jane Brockmann, Timothy J. Roper, Marc Naguib, Katherine E. Wynne-Edwards, Chris Barnard, John Mitani, 2011-07-29 Advances in the Study of Behavior was initiated over 40 years ago to

serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This volume makes another important contribution to the development of the field by presenting theoretical ideas and research to those studying animal behavior and to their colleagues in neighboring fields This volume reflects many of the current themes in animal behavior including the evolution of social behavior sexual selection and communication It also reflects controversial topics on which the authors provide interesting new insights Advances in the Study of Behavior is now available online at ScienceDirect full text online from volume 30 onwards

*Walker's Carnivores of the World* Ronald M. Nowak, 2005 Although they are highly intelligent ruthless predators carnivores are increasingly rare From the dwarf mongoose to the polar bear carnivores are at once respected and misunderstood invoking both fear and curiosity in the humans with whom they share their world Ronald M Nowak celebrates these fascinating mammals in Walker's Carnivores of the World This comprehensive guide featuring 225 illustrations covers the world's eight terrestrial families of carnivores Each generic account comprises scientific and common names number and distribution of species physical attributes measurements hunting and social activity reproduction habitat population dynamics longevity and status of threatened species A thought provoking overview by David W Macdonald and Roland W Kays is packed with results of the latest field and laboratory research on topics ranging from evolutionary history to the adaptive value of fur patterns Emphasizing the interplay of social life morphology and predatory behavior it provides an up to date panorama of the world's carnivores

**The Biology and Conservation of Wild Canids** David W. Macdonald, Claudio Sillero-Zubiri, 2004-06-24 No group of wild mammals so universally captures the emotions of people world wide than do wild canids That emotion can be enchantment and fascination but it can also be loathing because the opportunism that is the hallmark of the dog family also leads them into conflict with humans In the developed world at least the fascination with wild canids doubtless stems from people's captivation with domestic dogs everybody feels they are an expert on canids While most people may be familiar with only the better known members of the dog family such as the grey wolf and the red fox there are in fact 36 species of wolves dogs jackals and foxes They attract hugely disproportionate interest from academics conservationists veterinarians wildlife managers and the general public This book brings together in single volume an astonishing synthesis of research done in the last twenty years and is the first truly compendious synthesis on wild canids Beginning with a complete account of all 36 canid species there follow six review chapters that emphasise topics most relevant to canid conservation science including evolution and systematics behavioural ecology population genetics diseases conflict control of troublesome species and conservation tools Fifteen detailed case studies then delve deeply into the very best species investigations currently available written by all the leading figures in the field Much of the material is previously unpublished and will make fascinating reading far beyond the confines of canid specialists These chapters portray the unique attributes of wild canids their fascinating and conflictive relationship with man and suggestions for future research and conservation measures for the Canidae While most canid species are widespread and

thrive in human dominated landscapes several are in severe jeopardy habitat loss illegal hunting persecution by farmers and disease all imperil dwindling populations A final chapter analyses the requirements of and approaches to practical conservation with lessons that go far beyond the dog family It concentrates particular attention on priorities for the protection of the most threatened canid species including the red wolf African wild dog Ethiopian wolf Island fox and Darwin s fox The wild canids provide examples that will thrill the evolutionary biologists and theoretician enthral the natural historian and challenge the conservationist and wildlife manager Anybody interested in evolutionary and behavioural biology in mammals in the environment or in conservation will find much that is new and enriching in this book

**Swimming with Piranhas at Feeding Time: My Life Doing Dumb Stuff with Animals** Richard Conniff,2010-06-28 Hilariously informative This book will remind you why you always wanted to be a naturalist Outside In this thrilling foray into the animal kingdom Richard Conniff takes readers on an adventure packed journey as he courts the most dangerous animals and lives to tell the tale He lets African wild dogs sniff his neck to test the idea that they are vicious man eaters sticks his hand in a fire ant mound and does multiple takes for a pretty camerawoman on a television shoot and flings chicken carcasses into piranha infested waters to clock how quickly they disappear before diving in himself This collection offers a rare chance to go along on these death defying treks and see life through the eyes of a bona fide field naturalist

*The Social Gene* Anthony Caswell,2016-10-06 The hypothesis of animal interactions known as kin selection or the selfish gene proposes that only blood relatives are capable of forming herds and engaging in unselfish acts with each other While this may satisfy the expectations of many evolutionists the animals themselves frequently do not adhere to this restriction There are several examples of animals in the wild assisting unrelated individuals at a cost to themselves and many also form colonies that contain unrelated individuals In this monograph the author proposes a modification to the theory that renders the restriction of kin selection altogether unnecessary Instead he argues that the genes of animals that control social interactions do not give instructions at all but nudge the animals through combinations of rewards and penalties towards their best long term interests in accord with the principles of Darwinian evolution This exposition has been built on the many excellent published observations and experiments of researchers in the field and in the laboratory It accounts for all general types of sociality of animals and humans including passive sociality social exchange sexual segregation dispersal adoption mutual support cooperation altruism and human homosexuality

**Conservation of Wildlife Populations** L. Scott Mills,2012-12-17 Population ecology has matured to a sophisticated science with astonishing potential for contributing solutions to wildlife conservation and management challenges And yet much of the applied power of wildlife population ecology remains untapped because its broad sweep across disparate subfields has been isolated in specialized texts In this book L Scott Mills covers the full spectrum of applied wildlife population ecology including genomic tools for non invasive genetic sampling predation population projections climate change and invasive species harvest modeling viability analysis focal species concepts and

analyses of connectivity in fragmented landscapes With a readable style analytical rigor and hundreds of examples drawn from around the world Conservation of Wildlife Populations 2nd ed provides the conceptual basis for applying population ecology to wildlife conservation decision making Although targeting primarily undergraduates and beginning graduate students with some basic training in basic ecology and statistics in majors that could include wildlife biology conservation biology ecology environmental studies and biology the book will also be useful for practitioners in the field who want to find in one place and with plenty of applied examples the latest advances in the genetic and demographic aspects of population ecology Additional resources for this book can be found at [www.wiley.com/go/mills\\_wildlifepopulations](http://www.wiley.com/go/mills_wildlifepopulations)

*Yellowstone Wolves* Douglas W. Smith, Daniel R. Stahler, Daniel R. MacNulty, 2020-12-28 This beautifully illustrated volume on the Yellowstone Wolf Project includes an introduction by Jane Goodall and an exclusive online documentary The reintroduction of wolves to Yellowstone National Park was one of the greatest wildlife conservation achievements of the twentieth century Eradicated after the park was first established these iconic carnivores returned in 1995 when the US government reversed its century old policy of extermination In the intervening decades scientists have built a one of a kind field study of these wolves their behaviors and their influence on the entire ecosystem *Yellowstone Wolves* tells the incredible story of the Yellowstone Wolf Project as told by the people behind it This wide ranging volume highlights what has been learned in the decades since reintroduction as well as the unique blend of research techniques used to gain this knowledge We learn about individual wolves population dynamics wolf prey relationships genetics disease management and policy and the rippling ecosystem effects wolves have had on Yellowstone's wild and rare landscape Featuring a foreword by Jane Goodall beautiful images a companion online documentary by celebrated filmmaker Bob Landis and contributions from more than seventy wolf and wildlife conservation luminaries from Yellowstone and around the world *Yellowstone Wolves* is an informative and beautifully realized celebration of the extraordinary Yellowstone Wolf Project

**Carnivore Behavior, Ecology, and Evolution** John L. Gittleman, 1989 Volume 2

**The Evolution of Animal Communication** William A. Searcy, Stephen Nowicki, 2010-01-01 Gull chicks beg for food from their parents Peacocks spread their tails to attract potential mates Meerkats alert family members of the approach of predators But are these and other animals sometimes dishonest That's what William Searcy and Stephen Nowicki ask in *The Evolution of Animal Communication* They take on the fascinating yet perplexing question of the dependability of animal signaling systems The book probes such phenomena as the begging of nesting birds alarm calls in squirrels and primates carotenoid coloration in fish and birds the calls of frogs and toads and weapon displays in crustaceans Do these signals convey accurate information about the signaler its future behavior or its environment Or do they mislead receivers in a way that benefits the signaler For example is the begging chick really hungry as its cries indicate or is it lobbying to get more food than its brothers and sisters Searcy and Nowicki take on these and other questions by developing clear definitions of key issues by reviewing the most relevant empirical data and game theory

models available and by asking how well theory matches data They find that animal communication is largely reliable but that this basic reliability also allows the clever deceiver to flourish Well researched and clearly written their book provides new insight into animal communication behavior and evolution Reintroduction of Top-Order Predators Matt W. Hayward, Michael Somers, 2009-04-13 Large predators are among the most threatened species on the planet and ways of conserving them in the face of increasing human populations and associated resource requirements are becoming critical This book draws upon the experiences of some of the world s foremost large carnivore specialists to discuss the numerous issues associated reintroducing large predators back into their natural habitats Reviews of internationally renowned reintroduction programs for wolves European lynx and African wild dog reveal the successes and failures of these actions Experts on tigers snow leopards and jaguars contend that there are other conservation options of higher priority that will ensure their security in the long term Other experts discuss more theoretical aspects such as whether we know enough about these species to be able to predict their behavioural or ecological response to the reintroduction process Social economic political and genetic considerations are also addressed
