HUGO AWARD WINNER

GREG
EGAN

"If you haven't read any Egan, you *should*. He takes the wildest frontiers of today's science and turns them into brain-bending speculative fiction that continually challenges the reader's ideas of both reality and humanity."

The Arrows Of Time Orthogonal Book Three:

Arrows of Time Greg Egan, 2014-07-21 In an alien universe where space and time play by different rules interstellar voyages last longer for the travellers than for those they left behind After six generations in flight the inhabitants of the mountain sized spacecraft the Peerless have used their borrowed time to develop advanced technology that could save their home world from annihilation But not every traveller feels allegiance to a world they have never seen and as tensions mount over the risks of turning the ship around and starting the long voyage home a new complication arises the prospect of constructing a messaging system that will give the Peerless news of its own future While some of the crew welcome the opportunity to be warned of impending dangers and perhaps even hear reports of the ship's triumphant return others are convinced that knowing what lies ahead will be oppressive and that the system will be abused Agata longs for a chance to hear a message from the ancestors back on the home world proving that the sacrifices of the travellers have not been in vain but her most outspoken rival Ramiro fears that the system will undermine every decision the travellers make When a vote fails to settle the matter and dissent erupts into violence Ramiro Agata and their allies must seek a new way to bring peace to the Peerless by traveling to a world where time runs in reverse The Arrows of Time is the final volume of the Orthogonal trilogy bringing a powerful and surprising conclusion to the epic story of the Peerless that began with The Clockwork Rocket and The Eternal Flame

Greg Egan Karen Burnham, 2014-04-30 Greg Egan 1961 publishes works that challenge readers with rigorous deeply informed scientific speculation He unapologetically delves into mathematics physics and other disciplines in his prose putting him in the vanguard of the hard science fiction renaissance of the 1990s A working physicist and engineer Karen Burnham is uniquely positioned to provide an in depth study of Egan's science heavy oeuvre Her survey of the author's career covers novels like Permutation City and Schild's Ladder and the Hugo Award winning novella Oceanic analyzing how Egan used cutting edge scientific theory to explore ethical questions and the nature of humanity As Burnham shows Egan's collected works constitute a bold artistic statement that narratives of science are equal to those of poetry and drama and that science holds a place in the human condition as exalted as religion or art The volume includes a rare interview with the famously press shy Egan covering his works themes intellectual interests and thought processes

Dichronauts Greg Egan, 2017-07-11 Seth is a surveyor along with his friend Theo a leech like creature running through his skull who tells Seth what lies to his left and right Theo in turn relies on Seth for mobility and for ordinary vision looking forwards and backwards Like everyone else in their world they are symbionts depending on each other to survive In the universe containing Seth's world light cannot travel in all directions there is a dark cone to the north and south Seth can only face to the east or the west if he tips his head backwards If he starts to turn to the north or south his body stretches out across the landscape and to rotate as far as north north east is every bit as impossible as accelerating to the speed of light Every living thing in Seth's world is in a state of perpetual migration as they follow the sun's shifting orbit and the narrow

habitable zone it creates Cities are being constantly disassembled at one edge and rebuilt at the other with surveyors mapping safe routes ahead But when Seth and Theo join an expedition to the edge of the habitable zone they discover a terrifying threat a fissure in the surface of the world so deep and wide that no one can perceive its limits As the habitable zone continues to move the migration will soon be blocked by this unbridgeable void and the expedition has only one option to save its city from annihilation descend into the unknown The Orthogonal Trilogy Greg Egan,2016-10-18 The complete Orthogonal Trilogy by Greg Egan Containing The Clockwork Rocket The Eternal Flame and The Arrows of Time

Historical Dictionary of Science Fiction in Literature M. Keith Booker,2014-10-01 The Historical Dictionary of Science Fiction in Literature is a useful reference to the broad and burgeoning field of science fiction literature Science fiction literature has gained immensely in critical respect and attention while maintaining a broad readership However despite the fact that it is a rapidly changing field contemporary science fiction literature also maintains a strong sense of its connections to science fiction of the past which makes a historical reference of this sort particularly valuable as a tool for understanding science fiction literature as it now exists and as it has evolved over the years The Historical Dictionary of Science Fiction in Literature covers the history of science fiction in literature through a chronology an introductory essay and an extensive bibliography The dictionary section has over 300 cross referenced entries including significant people themes critical issues and the most significant genres that have formed science fiction literature This book is an excellent access point for students researchers and anyone wanting to know more about this subject **Galactic Empires** Neil Clarke,2017-01-17 Neil Clarke publisher of the award winning Clarkesworld magazine presents a collection of thought provoking and galaxy spanning array of galactic short science fiction From E E Doc Smith s Lensman to George Lucas Star Wars the politics and process of Empire have been a major subject of science fiction s galaxy spanning fictions The idiom of the Galactic Empire allows science fiction writers to ask and answer questions that are shorn of contemporary political ideologies and allegiances This simple narrative slight of hand allows readers and writers to see questions and answers from new and different perspectives The stories in this book do just that What social political and economic issues do the organizing structure of empire address Often the size shape and fates of empires are determined not only by individuals but by geography natural forces and technology As the speed of travel and rates of effective communication increase so too does the size and reach of an Imperial bureaucracy Sic itur ad astra Thus one journeys to the stars At the beginning of the twentieth century writers such as Kipling and Twain were at the forefront of these kinds of narrative observations but as the century drew to a close it was writers like Iain M Banks who helped make science fiction relevant That tradition continues today with award winning writers like Ann Leckie whose 2013 debut novel Ancillary Justice hinges upon questions of imperialism and empire Here then is a diverse collection of stories that asks the questions that science fiction asks best Empire How Why And to what effect Table of Contents Winning Peace by Paul J McAuley Night s Slow Poison by Ann Leckie All the Painted Stars by Gwendolyn Clare Firstborn by Brandon

Lesky,René F.

Swarttouw,2010-03-18 The present book is about the Askey scheme and the q Askey scheme which are graphically displayed right before chapter 9 and chapter 14 respectively The families of orthogonal polynomials in these two schemes generalize the classical orthogonal polynomials Jacobi Laguerre and Hermite polynomials and they have properties similar to them In fact they have properties so similar that I am inclined following Andrews Askey 34 to call all families in the q Askey scheme classical orthogonal polynomials and to call the Jacobi Laguerre and Hermite polynomials very classical orthogonal polynomials These very classical orthogonal polynomials are good friends of mine since most the beginning of my mathematical career When I was a fresh PhD student at the Mathematical Centre now CWI in Amsterdam Dick Askey spent a sabbatical there during the academic year 1969 1970 He lectured to us in a very stimulating

way about hypergeometric functions and classical orthogonal polynomials Even better he gave us problems to solve which might be worth a PhD He also pointed out to us that there was more than just Jacobi Laguerre and Hermite polynomials for instance Hahn polynomials and that it was one of the merits of the Higher Transcendental Functions Bateman project that it included some newer stuff like the Hahn polynomials see 198 10 23 **The Best Science Fiction and Fantasy of the Year,**
