World Economic Outlook, October 2019

International Monetary Fund. Research Dept.,2019-10-15 Global growth is forecast at 3 0 percent for 2019 its lowest level since 2008 09 and a 0 3 percentage point downgrade from the April 2019 World Economic Outlook *World Economic Outlook, October 2016* International Monetary Fund. Research Dept.,2016-10-04 According to the October 2016 World Economic Outlook global growth is projected to slow to 3 1 percent in 2016 before recovering to 3 4 percent in 2017 The forecast revised down by 0 1 percentage point for 2016 and 2017 relative to April s report reflects a more subdued outlook for advanced economies following the June U K vote in favor of leaving the European Union Brexit and weaker than expected growth in the United States These developments have put further downward pressure on global interest rates as monetary policy is now expected to remain accommodative for longer Although the market reaction to the Brexit shock was reassuringly orderly the ultimate impact remains very unclear as the fate of institutional and trade arrangements between the United Kingdom and the European Union is uncertain Financial market sentiment toward emerging market economies has improved with expectations of lower interest rates in advanced economies reduced concern about China s near term prospects following policy support to growth and some firming of commodity prices But prospects differ sharply across countries and regions with emerging Asia in general and India in particular showing robust growth and sub Saharan Africa experiencing a sharp slowdown In advanced economies a subdued outlook subject to sizable uncertainty and downside risks may fuel further political discontent with anti integration policy platforms gaining more traction Several emerging market

and developing economies still face daunting policy challenges in adjusting to weaker commodity prices These worrisome prospects make the need for a broad based policy response to raise growth and manage vulnerabilities more urgent than ever **World Economic Outlook, October 2017** International Monetary Fund. Research Dept.,2017-10-10 The global upswing in economic activity is strengthening Global growth which in 2016 was the weakest since the global financial crisis at 3.2 percent is projected to rise to 3.6 percent in 2017 and to 3.7 percent in 2018 The growth forecasts for both 2017 and 2018 are 0.1 percentage point stronger compared with projections earlier this year Broad based upward revisions in the euro area Japan emerging Asia emerging Europe and Russia where growth outcomes in the first half of 2017 were better than expected more than offset downward revisions for the United States and the United Kingdom But the recovery is not complete while the baseline outlook is strengthening growth remains weak in many countries and inflation is below target in most advanced economies Commodity exporters especially of fuel are particularly hard hit as their adjustment to a sharp step down in foreign earnings continues And while short term risks are broadly balanced medium term risks are still tilted to the downside The welcome cyclical pickup in global activity thus provides an ideal window of opportunity to tackle the key policy challenges namely to boost potential output while ensuring its benefits are broadly shared and to build resilience against downside risks A renewed multilateral effort is also needed to tackle the common challenges of an integrated global economy

World Economic Outlook, October 2009 International Monetary Fund. Research Dept.,2009-10-15 This edition of the World Economic Outlook explores the prospects for growth in the aftermath of the financial crisis The fragile nature of the recovery will present many challenges These include the need for continued strong monetary fiscal and financial policies ongoing efforts to restore the financial sector to health improvements in private demand and preparation of exit strategies on the fiscal monetary and financial fronts The first of two analytical chapters included in this edition Monetary Policy and Asset Prices What Do We Learn from Booms and Busts explores whether there is a role for monetary policy in preventing asset price busts The second Medium Run Output Evolutions after Crises A Historical Perspective explores the effect of large economic shocks on output and its composition including variations related to initial conditions the type of shock and economic policies

World Economic Outlook, October 2012 International Monetary Fund. Research Dept.,2012-10-08 The October 2012 World Economic Outlook WEO assesses the prospects for the global recovery in light of such risks as the ongoing euro area crisis and the fiscal cliff facing U.S. policymakers Reducing the risks to the medium term outlook implies reducing public debt in the major advanced economies and Chapter 3 explores 100 years of history of dealing with public debt overhangs In emerging market and developing economies activity has been slowed by policy tightening in response to capacity constraints weaker demand from advanced economies and country specific factors but policy improvements have raised these economies resilience to shocks an issue explored in depth in Chapter 4 *World Economic Outlook, October 2015* International Monetary Fund. Research Dept.,2015-10-06 This issue discusses a number of factors affecting global

growth as well as growth prospects across the world's main countries and regions. It assesses the ongoing recovery from the global financial crisis in advanced and emerging market economies and evaluates risks both upside and downside including those associated with commodity prices, currency fluctuations and financial market volatility. A special feature examines in detail causes and implications of the recent commodity price downturn. Analytical chapters look at the effects of commodity windfalls on potential output and of exchange rate movements on trade.

World Economic Outlook, October 2018 International Monetary Fund. Research Dept., 2018-10-09. Global growth for 2018-19 is projected to remain steady at its 2017 level but its pace is less vigorous than projected in April and it has become less balanced. Downside risks to global growth have risen in the past six months and the potential for upside surprises has receded. Global growth is projected at 3.7 percent for 2018-19, 0.2 percentage point lower for both years than forecast in April. The downward revision reflects surprises that suppressed activity in early 2018 in some major advanced economies, the negative effects of the trade measures implemented or approved between April and mid-September as well as a weaker outlook for some key emerging market and developing economies arising from country-specific factors, tighter financial conditions, geopolitical tensions and higher oil import bills. The balance of risks to the global growth forecast has shifted to the downside in a context of elevated policy uncertainty. Several of the downside risks highlighted in the April 2018 World Economic Outlook (WEO) such as rising trade barriers and a reversal of capital flows to emerging market economies with weaker fundamentals and higher political risk have become more pronounced or have partially materialized. Meanwhile the potential for upside surprises has receded given the tightening of financial conditions in some parts of the world, higher trade costs, slow implementation of reforms recommended in the past and waning growth momentum.

Regional Economic Outlook, October 2017, Sub-Saharan Africa International Monetary Fund. African Dept., 2017-11-27. Growth in sub-Saharan Africa has recovered relative to 2016 but the momentum is weak and per capita incomes are expected to barely increase. Further vulnerabilities have risen in many countries adding to the urgency of implementing the fiscal consolidations planned in most countries and with stepped-up efforts to strengthen growth.

An Assessment of the Global Impact of the Financial Crisis P. Arestis, R. Sobreira, 2010-12-14. This topical volume analyzes the impact of the 2008 financial crisis. It considers the origins and explanations of the current crisis, examines the regulatory implications and with specific focus on developing countries it provides a strategy for economic growth that can guarantee financial stability in the future.

World Economic Outlook, April 2016 International Monetary Fund. Research Dept., 2016-04-12. Major macroeconomic realignments are affecting prospects differentially across the world's countries and regions. The April 2016 WEO examines the causes and implications of these realignments including the slowdown and rebalancing in China, a further decline in commodity prices, a related slowdown in investment and trade and declining capital flows to emerging market and developing economies which are generating substantial uncertainty and affecting the outlook for the global economy. Additionally, analytical chapters examine the slowdown in capital flows to

emerging market economies since their 2010 peak its main characteristics how it compares with past slowdowns the factors that are driving it and whether exchange rate flexibility has changed the dynamics of the capital inflow cycle and assess whether product and labor market reforms can improve the economic outlook in advanced economies looking at the recent evolution and scope for further reform the channels through which reforms affect economic activity under strong versus weak economic conditions reforms short to medium term macroeconomic effects and sequencing of reforms and coordination with other policies to maximize their potential quantitative economic benefits A special feature analyzes in depth the energy transition in an era of low fossil fuel prices *World Economic Outlook, April 2018* International Monetary Fund. Research Dept.,2018-04-17 This report describes the world economic outlook as of April 2018 projecting that advanced economies will continue to expand above their potential growth rates before decelerating while growth in emerging markets in developing economies will rise before leveling off It details global prospects and policies including risks to the forecast and essential determinants of long term economic growth labor force participation in advanced economies the declining share of manufacturing jobs globally and in advanced economies and the process through which innovative activity and technological knowledge spread across national borders **Global Capital Flows to Infrastructure Investments** Joseph B. Oyedele,2014-02-17 The demand pressure and the plethora of evidences observed in the form of increasing infrastructure financing gap ageing infrastructure environmental factors such as climate change and rising quality standards are factors attracting institutional and private sector participation in infrastructure investment Therefore the search for innovative means of financing infrastructure has become incessant Also the features of the financial landscape especially in a financial crisis has further underpinned the significance of looking beyond the present infrastructure need to a more sustained infrastructure financing scheme anticipated from institutional investors A well established capital market has therefore been identified as a viable option for long term and steady global capital flows to financing infrastructure projects else the burden will remain on governments to offer direct or indirect support to private investors in attracting financing for infrastructure development This book therefore conceptually investigates the potentials of the capital market and institutional investors capital flows in bridging the global infrastructure funding gap A fundamental conclusion from the book revealed that institutional investors particularly pension funds have the capacity to pool enormous resources into the infrastructure market thus emphatically projecting them as a force to be reckoned with in the global infrastructure investments *Fiscal Monitor, April 2012* International Monetary Fund. Fiscal Affairs Dept.,2012-04-20 Overall fiscal risks remain elevated according to this issue although there are signs that in some key respects they are less acute than six months ago Past efforts with fiscal consolidation are beginning to bear fruit particularly when buttressed by credible institutional commitments Nevertheless debt ratios in many advanced economies are at historical levels and rising borrowing requirements remain very large financial markets continue to be in a state of alert and downside risks to the global economy predominate In this uncertain

environment the challenge for fiscal policy is to find the right balance between exploiting short term space to support the fragile recovery and rebuilding longer term space by advancing fiscal consolidation Against that background this issue examines in more detail the concept of fiscal space or the scope that policymakers have to calibrate the pace of fiscal adjustment without undermining fiscal sustainability A number of conclusions emerge in regard to countries ongoing vulnerability to unexpected shocks the potential for substantial negative impacts of fiscal adjustment on activity possible overstatements of short term pressures on the public finances in some countries as general government gross debt ratios have risen the implications of countries having flexibility in the short term but not the longer term and the monitoring and enforcement challenges raised by second generation fiscal rules

World Economic Outlook, April 2019 International Monetary Fund. Research Dept.,2019-04-09 After strong growth in 2017 and early 2018 global economic activity slowed notably in the second half of last year reflecting a confluence of factors affecting major economies China s growth declined following a combination of needed regulatory tightening to rein in shadow banking and an increase in trade tensions with the United States The euro area economy lost more momentum than expected as consumer and business confidence weakened and car production in Germany was disrupted by the introduction of new emission standards investment dropped in Italy as sovereign spreads widened and external demand especially from emerging Asia softened Elsewhere natural disasters hurt activity in Japan Trade tensions increasingly took a toll on business confidence and so financial market sentiment worsened with financial conditions tightening for vulnerable emerging markets in the spring of 2018 and then in advanced economies later in the year weighing on global demand Conditions have eased in 2019 as the US Federal Reserve signaled a more accommodative monetary policy stance and markets became more optimistic about a US China trade deal but they remain slightly more restrictive than in the fall

Introducing a New Broad-based Index of Financial Development Katsiaryna Svirydzenka,2016-01-12 There is a vast body of literature estimating the impact of financial development on economic growth inequality and economic stability A typical empirical study approximates financial development with either one of two measures of financial depth the ratio of private credit to GDP or stock market capitalization to GDP However these indicators do not take into account the complex multidimensional nature of financial development The contribution of this paper is to create nine indices that summarize how developed financial institutions and financial markets are in terms of their depth access and efficiency These indices are then aggregated into an overall index of financial development With the coverage of 183 countries on annual frequency between 1980 and 2013 the database should offer a useful analytical tool for researchers and policy makers

Coping with Crisis Nancy Bermeo, Jonas

Pontusson, 2012-09-06 The financial crisis that erupted on Wall Street in 2008 quickly cascaded throughout much of the advanced industrial world Facing the specter of another Great Depression policymakers across the globe responded in sharply different ways to avert an economic collapse Why did the response to the crisis and its impact on individual countries vary so greatly among interdependent economies How did political factors like public opinion and domestic interest groups shape policymaking in this moment of economic distress *Coping with Crisis* offers a rigorous analysis of the choices societies made as a devastating global economic crisis unfolded With an ambitiously broad range of inquiry *Coping with Crisis* examines the interaction between international and domestic politics to shed new light on the inner workings of democratic politics The volume opens with an engaging overview of the global crisis and the role played by international bodies like the G 20 and the WTO In his survey of international initiatives in response to the recession Eric Helleiner emphasizes the limits of multilateral crisis management finding that domestic pressures were more important in reorienting fiscal policy He also argues that unilateral decisions by national governments to hold large dollar reserves played the key role in preventing a dollar crisis which would have considerably worsened the downturn David R Cameron discusses the fiscal responses of the European Union and its member states He suggests that a profound coordination problem involving fiscal and economic policy impeded the E U's ability to respond in a timely and effective manner The volume also features several case studies and country comparisons Nolan McCarty assesses the performance of the American political system during the crisis He argues that the downturn did little to dampen elite polarization in the U S divisions within the Democratic Party as well as

the influence of the financial sector narrowed the range of policy options available to fight the crisis Ben W Ansell examines how fluctuations in housing prices in 30 developed countries affected the policy preferences of both citizens and political parties His evidence shows that as housing prices increased homeowners expressed preferences for both lower taxes and a smaller safety net As more citizens supplement their day to day income with assets like stocks and housing Ansell s research reveals a potentially significant trend in the formation of public opinion Five years on the prospects for a prolonged slump in economic activity remain high and the policy choices going forward are contentious But the policy changes made between 2007 and 2010 will likely constrain any new initiatives in the future Coping with Crisis offers unmatched analysis of the decisions made in the developed world during this critical period It is an essential read for scholars of comparative politics and anyone interested in a comprehensive account of the new international politics of austerity

Global Linkages and Economic Rebalancing in East Asia Shigeyuki Hamori,2013 In the wake of the global financial crisis leading industrialized countries have managed to show only a gradual recovery while East Asian economies have surged ahead In particular China achieved growth in excess of 10% in 2010 and is expected to continue growing at a rapid pace It appears that in the coming years East Asia will play an even greater role as a growth center leading global economic expansion Following the Asian currency crisis of 1997OC08 consumption and investment in the region decreased considerably and East Asian economies recovered on the strength of exports Presently however amid a less than robust recovery in the US and Europe the sustainability of East Asia s reliance on export led growth has been called into question The region s transition to growth based on a balance of foreign and domestic demand is important for both building a stronger foundation for sustainable growth and buttressing global economic expansion Moreover the rebalancing of demand in East Asia holds the key to rectifying global current account imbalances OCo the disadvantage of uneven international capital flows This unique volume illuminates policy issues involved in the efforts to promote the rebalancing of demand in East Asia

Growth Forecast Errors and Fiscal Multipliers Mr.Olivier J. Blanchard,Mr.Daniel Leigh,2013-01-03 This paper investigates the relation between growth forecast errors and planned fiscal consolidation during the crisis We find that in advanced economies stronger planned fiscal consolidation has been associated with lower growth than expected with the relation being particularly strong both statistically and economically early in the crisis A natural interpretation is that fiscal multipliers were substantially higher than implicitly assumed by forecasters The weaker relation in more recent years may reflect in part learning by forecasters and in part smaller multipliers than in the early years of the crisis
