CONCLUSIONS The authors have shown that the use of the proposed algorithm for the identification of the parameters of the model of the system of the control of the motion of the robot arm is possible. The results of the identification of the parameters of the model of the system of the control of the motion of the robot arm are presented. Flowing water provides a constant habitat for many species of plants and animals. The water is constantly moving, which allows for a constant supply of oxygen and nutrients. The water is also constantly changing, which allows for a constant supply of food and shelter. The water is also constantly changing, which allows for a constant supply of food and shelter.

Figure 1. A schematic diagram of the experimental design. The subjects were divided into two groups: the control group and the experimental group. The control group received a standard training program, while the experimental group received a modified training program. The results of the training program were compared between the two groups.
