

# IGNITION SYSTEM

## DESCRIPTION

"PEI" system (pointless electronic ignition system) is employed for GT250N. "PEI" of this model is different from that of RM and TS series in that the pulser coil is located outside the outer surface of the flywheel. A small magnet is embedded on the outer surface of the flywheel. The magnet and pulser coil cause the "CDI" unit to operate.

This system is characterized by the fact that stable and reliable ignition timing is secured free from the effect of the load condition of the magneto.

The ignition coil used in the "PEI" system of GT250N is slightly different in that each end of ignition secondary winding is connected through a cord to the spark plug. Thus, the two plugs receive sparking energy at the same time.

**New Trends in Ionic (Co)polymers and Hybrids** Ecaterina Stela Dragan, 2007. Ionic polymers are present almost everywhere in the world, biological systems being the most important reservoir of ionic polymers such as nucleic acids and many proteins, alginic acid and so on. Artificial ionic polymers derived from natural polymers such as chitin, cellulose or starch by adequate chemical transformations and a multitude of synthetic ionic polymers are generated in the laboratory. They can contain ionic or ionisable groups. Ionic polymers, either artificial or synthetic, have a multitude of applications such as stabilisation or destabilisation of dispersions, thickening of solutions, oil recovery, aids, water purification, corrosion inhibitors, soil conditioners, anti static agents, additives in cosmetics and foods, surface modification and so forth. Solid ionic hybrid materials found applications such as polymer electrolytes or substrates for the organic synthesis in solid phase. Many books and article reviews were dedicated to this wide class of polymers, but the permanent diversification of their structures and applications ask for new and updated overviews on this field. Therefore, this book reports updated information from literature as well as original contributions in the field of ionic co polymers and hybrids, mainly on the applications of ionic polymers and hybrids such as self assembled multi layers ionic polymers containing azobenzene chromophore, phase separation processes, chelating ion exchangers, polymer electrolytes, functionalised solid surfaces and ionic hybrid hydrogels.
