detection of biomarkers in bladder cancer in addition to monitoring disease recurrence to understand the impact and predict potential outcomes A variety of urine biomarkers have been developed to detect bladder cancer and prognostic risk stratification including mutational DNA and the levels of RNA expression Circulating tumor cells have also been identified as a potential biomarker for bladder cancer patients However there are significant challenges as bladder cancer has demonstrated high levels of cellular and molecular heterogeneity and some markers do not have sufficient sensitivity for accurate detection Therefore further studies are required to continue to identify new novel biomarkers for bladder cancer The aim of this Research Topic is to discuss novel biomarkers in bladder cancer and how it impacts the disease progression and the survival rate for bladder cancer patients
