Marasinghe, William J. Kennedy, 2008-12-10 This book is intended for use as the textbook in a second course in applied statistics that covers topics in multiple regression and analysis of variance at an intermediate level Generally students enrolled in such courses are primarily graduate majors or advanced undergraduate students from a variety of disciplines These students typically have taken an introductory level statistical methods course that requires the use a software system such as SAS for performing statistical analysis Thus students are expected to have an understanding of basic

concepts of statistical inference such as estimation and hypothesis testing Understandably adequate time is not available in a first course in statistical methods to cover the use of a software system adequately in the amount of time available for instruction The aim of this book is to teach how to use the SAS system for data analysis The SAS language is introduced at a level of sophistication not found in most introductory SAS books Important features such as SAS data step programming pointers and line hold speakers are described in detail The powerful graphics support available in SAS is emphasized throughout and many worked SAS program examples contain graphic components
