Nueva edición del texto de neuroanatomía más didáctico y más ilustrado que consigue explicar esta complicada parte de la anatomía humana de una forma asequible y relativamente sencilla a los estudiantes de Medicina. Los capítulos están organizados por áreas anatómicas y en ellos se hace un análisis conjunto de los sistemas motores sensoriales y cognitivos integrando la neuroanatomía clínica con las bases de la práctica y aplicación clínica de la neurociencia. Asimismo cada uno de los capítulos tiene una estructura altamente didáctica y muy homogénea. Cada uno de ellos se inicia con un breve índice del capítulo junto con unos objetivos de aprendizaje y al final del mismo se incluyen unos cuadros de información esencial a modo de resumen de los puntos más importantes. Una de las fortalezas de este texto es su iconografía. En esta nueva edición si cabe el abordaje a nivel más visual. Aproximadamente un 80% del total de las ilustraciones corresponde a dibujos esquemáticos a 4 colores altamente explicativos y detallados. Se acompañan también de imágenes de diagnóstico básicamente correspondientes a RM. Edición actualizada que integra hábilmente la neuroanatomía clínica con la aplicación clínica de la neurociencia empleando textos claros y material gráfico explicativo que hacen más accesibles estas dos disciplinas. No existe mejor guía ilustrada sobre esta compleja materia lo que la convierte en una obra de referencia ideal para estudiantes tanto de Medicina como de otros grados.
