

Neuron Structure

What are the essential structures that make up a neuron?

Why?

Cells are specialized for different functions in multicellular organisms. In animals, one unique kind of cell helps organisms survive by collecting information and sending messages throughout the body. The shapes and features of neurons, which are the primary cells in the nervous system, enable animals to experience all of the five senses; find food, mates, and shelter; and to survive in their diverse environments.

Model 1 – Parts of a Neuron

1. Model 1 is an illustration of two neurons. Label one of the neurons in the diagram with the following structures:

Cell body or soma

Axon

Cell nucleus

Synapse

Dendrites

See Model 1.

2. Which structure(s) on the neuron in Model 1 would receive a signal from either a sensory cell (taste bud, touch receptor, retinal cell) or from another neuron?

The dendrites receive the signal from other cells.

3. Draw an arrow through the two cells in Model 1 to show the path of a nerve impulse if a message was being sent through the two neurons.

See dotted line in Model 1.

Fundamentals of Neurophysiology Robert F. Schmidt,2012-12-06 Again rapid advances in the brain sciences have made it necessary after only a few years to issue a revised edition of this text All the chapters have been reviewed and brought up to date and some have been largely rewritten The major revision has occurred in the chapters on the autonomic nervous system and the integrative functions of the central nervous system But in the discussion of the motor systems and other subjects as well recent insights have necessitated certain conceptual modifications In the description of the autonomic nervous system the role of the intestinal innervation has been brought out more clearly than before In addition there is a new presentation of the physiology of smooth muscle fibers and more attention has been paid to the postsynaptic adrenergic receptors because of the increasing therapeutic significance of the α_3 receptor concept A substantial section on the genital reflexes in man and woman including the extragenital changes during copulation has also been added The text on the integrative functions of the central nervous system has been expanded to include for the first time material on brain metabolism and blood flow and their dependence on the activity of the brain Reference is also made to recent results of research on split brain and aphasic patients and on memory as well as on the physiology of sleeping and dreaming

Biological Psychology Suzanne Higgs,Alison Cooper,Jonathan Lee,2019-10-26 The challenge of teaching bio psychology is first getting students up to speed with the basic brain functions and terminology then applying this to psychology and finally developing critical thinking about the subject This book uniquely addresses all three of these issues and provides a resource that supports students at each of these different levels of understanding Key features include New video animations for the biology chapters and many high quality illustrations throughout helping students grasp the basic neuroanatomy and microbiology Check your understanding questions in the book and MCQs online help students test their understanding and
