Civil Infrastructure Systems: Intelligent Renewal: Proceedings Of The Third International Symposium Franco Maceri,Mahendra P Singh,Pol Spanos,Fabio Casciati,1999-01-29 A civil infrastructure system CIS is better defined by its interactive effects and integration than by its individual components It transports people and goods delivers clean water electric power gas and liquid fuel preserves the environment from pollution facilitates communication and mitigates the impact of natural disasters Infrastructure systems are networks and or lifelines of which highways airports canals dams bridges embankments mass transit and telecommunication systems etc are important components The increasing demand for CIS availability while new constructions may be prevented from environmental considerations and in Europe from architectural motivations requires the improvement of the existing CIS In addition recent natural disasters have demonstrated the fragility of these systems and the devastating degree of socio economic loss that their failure can bring These trends are common in most industrial countries All these countries are in urgent need of cost effective strategies for planning design construction maintenance and retrofit of their respective CISs in order to enhance and sustain the current economic prosperity into the 21st century

Cyanobacterial Blooms in Freshwaters Elisabeth (Savi) Vardaka ,Konstantinos Ar. Kormas,2020-11-13 Cyanobacterial blooms are a water quality problem that is widely acknowledged to have detrimental ecological and economic effects in drinking and recreational water supplies and fisheries There is increasing evidence that cyanobacterial blooms have increased globally and are likely to expand in water resources as a result of climate change Of most concern are cyanotoxins along with the mechanisms that induce their release and determine their fate in the aquatic environment These secondary metabolites pose a potential hazard to human health and agricultural and aquaculture products that are intended for animal

and human consumption therefore strict and reliable control of cyanotoxins is crucial for assessing risk In this direction a deeper understanding of the mechanisms that determine cyanobacterial bloom structure and toxin production has become the target of management practices This Special Issue entitled Advancing Knowledge on Cyanobacterial Blooms in Freshwaters aims to bring together recent multi and interdisciplinary research from the field to the laboratory and back again driven by working hypotheses based on any aspect of mitigating cyanobacterial blooms from ecological theory to applied research
