The New Frontier of Network Physiology: From Temporal Dynamics to the Synchronization and Principles of Integration in Networks of Physiological Systems Plamen Ch. Ivanov, Andras Eke, Olga Sosnovtseva, 2022-02-17 The Handbook of Fatigue Management in Transportation Christina M. Rudin-Brown, Ashleigh J. Filtiness, 2023-08-02 In the world of transportation fatigue is a silent killer that can affect us all Understanding fatigue including how to manage it to minimize safety risk is of great importance However while it is one thing to recognize that fatigue is a critical safety issue it is quite another to set up a successful scientifically informed fatigue risk management programme This book is here to help It has been carefully designed as a comprehensive reference point bringing together international expertise from leaders in fatigue science and showcasing valuable insights from transportation industry practitioners The 40 authored chapters are divided into six sections to better understand fatigue science the consequences of fatigue in transportation contributors to fatigue managing fatigue and promoting alertness real world case studies of fatigue management in practice and future perspectives While it is possible to read each chapter in isolation most will be gained by reading the book as a whole Each chapter starts with an abstract overview and concludes with summary bullet points creating a handy quick check for key points This accessible text is for those who are interested in supporting alert and safe transportation operations It is suitable for professionals transport managers government advisors policy makers students academics and anyone who wants to learn more All transport modes road rail maritime and aviation are considered For anyone waking up to the complex challenge of fatigue management this handbook is a must

America's (Math) Education Crisis Larry Zafran, 2010-10-19 America's education system is in a state of crisis A growing number of America's youth cannot read write or do math at all close to grade level In many cases these students and their families do not realize this or care The situation is compounded by the fact that American society no longer values education and does not understand how learning actually works Frequent reference is made to the illusion of learning in underperforming schools The book explains the difference between true learning and just being exposed to material It explains the essential role that parents play and that even with encouragement a child cannot be forced to learn The book is targeted at parents teachers administrators government officials and concerned citizens Older students may also benefit from reading it Despite its frankness about topics which are often disregarded and avoided there is nothing in the book that students don't intuitively understand In particular many students regularly experience the anonymity of being herded like cattle The goal of the book is to raise awareness and discuss whether we can fix the problem We cannot address our nation's education crisis until people understand its underlying causes and scope The book tells the truth in contrast to the misinformation provided by the government and the news media Suggested changes for improvement are made including those that can be implemented quickly and easily and those that require a great deal of money and coordination along with a fundamental change in how America handles education This book is controversial and

covers issues that may anger upset or confuse some readers The book includes curse words to paint a vivid picture of the way many students speak and bluntly labels key aspects of our education system as bullsh t where applicable

Multitasking: Executive Functioning in Dual-Task and Task Switching Situations Tilo Strobach, Mike Wendt, Markus Janczyk, 2018-03-27 Multitasking refers to performance of multiple tasks The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks i e dual tasking or executing multiple tasks in varying sequences i e task switching In the literature numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and or sequentially active component of task sets in these situations However these approaches have been rather vague regarding explanatory concepts e g task set inhibition preparation shielding capacity limitation widely lacking theories on detailed mechanisms and or empirical evidence for specific subcomponents The present research topic aims at providing a selection of contributions on the details of executive functioning in dual task and task switching situations The contributions specify these executive functions by focusing on 1 fractionating assumed mechanisms into constituent subcomponents 2 their variations by age or in clinical subpopulations and or 3 their plasticity as a response to practice and training Magnetoencephalography: an emerging neuroimaging tool for studying normal and abnormal human brain development Christos Papadelis, Patricia Ellen Grant, Yoshio Okada, Hubert Preissl, 2015-10-12 Research on the human brain development has seen an upturn in the past years mostly due to novel neuroimaging tools that became available to study the anatomy and function of the developing brain Magnetic Resonance Imaging MRI and Diffusion Tensor Imaging DTI are beginning to be used more frequently in children to determine the gross anatomy and structural connectivity of their brain Functional MRI and Near Infrared Spectroscopy NIRS determine the hemodynamics and electroencephalography EEG the electrophysiological functions of the developing human brain Magnetoencephalography MEG complements EEG as the only other technique capable of directly measuring the developing brain electrophysiology Although MEG is still being used relatively rarely in pediatric studies the recent development in this technology is beginning to demonstrate its utility in both basic and clinical neurosciences MEG seems to be quite attractive for pediatric use since it measures the human brain activity in an entirely passive manner without possessing any conceivable risk to the developing tissue MEG sessions generally require minimal patient preparation and the recordings are extremely well tolerated from children Biomagnetic techniques also offer an indirect way to assess the functional brain and heart activity of fetuses in humans in utero by measuring the magnetic field outside the maternal abdomen Magnetic field produced by the electrical activity in the heart and brain of the fetus is not attenuated by the vernix a waxy film covering its entire skin A biomagnetic instrument specifically designed for fetal studies has been developed for this purpose Fetal MEG studies using such a system have shown that both spontaneous brain activity and evoked cortical activity can be measured from outside the abdomen of pregnant mothers Fetal MEG may become clinically very useful for

implementation and evaluation of intervention programs in at risk populations Biomagnetic instruments have also been developed for specifically measuring the brain activity in newborns infants and older children MEG studies have shown the usefulness of MEG for localizing active regions in the brain and also for tracking the longitudinal maturation of various sensory systems Studies of pediatric patients are beginning to show interesting functional pathology in autism spectrum disorder cerebral palsy epilepsy and other types of neurological and psychiatric disorders Down syndrome traumatic brain injury Tourette syndrome hearing deficits childhood migraine In this eBook we compile the state of the art MEG and other neuroimaging studies focused on pediatric population in both health and disease We believe a review of the recent studies of human brain development using MEG is quite timely since we are witnessing advances not only in the instrumentation optimized for the pediatric population but also in the research based on various types of MEG systems designed for both human fetuses in utero and neonates and older children

New Insights on Basic and Clinical Aspects of EEG and MEG Connectome Ryouhei Ishii, Roberto D. Pascual-Marqui, Leonides Canuet, Jing Xiang, William C. Gaetz, 2018-08-31

Recent advances in the neuroimaging field areas allow us to visualize the aggregate of neural connections at the macroscopic level within the brain the so called connectome In order to promote the development of the neurophysiological investigation of connectome of brain oscillations this eBook aims at bringing together contributions from researchers in basic and clinical neuroscience using EEG and MEG connectome analysis The most important focal point will be to address the functional roles of connectome of brain oscillations in contributing to understandings of higher cognitive processes in normal subjects and pathophysiology of psychiatric diseases This Research Topic presented novel methodologies and various applications of neurophysiological connectome analysis As a result these papers were cited more than 120 times in these four years in total and threw light and impact on new directions for investigating the connectome of human brain

Facing the Other: Novel Theories and Methods in Face Perception Research Davide Rivolta, Aina Puce, Mark A Williams, 2016-04-08

We rely heavily on faces during social interactions Humans possess the ability to recognise thousands of people very quickly and accurately without effort The serious social difficulties that follow abnormalities of the face recognition system i.e. prosopagnosia strongly underline the importance of typical face skills in our everyday life Over the last fifty years research on prosopagnosia along with research in the healthy population has provided insights into the cognitive and neural features behind typical face recognition This has also been achieved thanks to non invasive neuroimaging techniques such as functional Magnetic Resonance Imaging fMRI Electroencephalography EEG Magnetoencephalography MEG Diffusion Tensor Imaging DTI and Transcranial Magnetic Stimulation TMS However there is still much debate about the cognitive and neural mechanisms of face perception In the

current Research Topic we plan to gather experimental works opinions commentaries mini reviews and reviews that focus on new or novel theories and methods in face perception research Where is the field at the moment Do we need to re think the experimental procedures we have adopted so far Again what kind of techniques or combination of them and analysis methods will be important in the future From the experimental point of view we encourage both behavioural and neuroimaging contributions e g fMRI EEG MEG DTI and TMS Despite the main emphasis on face perception memory and identification we will also consider original works that focus on other aspects of face processing such as expression recognition attractiveness judgments and face imagery In addition animal investigations and experimental manipulations that alter face recognition abilities in typical human subjects e g hypnosis are also welcome Overall we are proposing a Research Topic that looks at face processing using different perspectives and welcome contributions from different domains such as psychology neurology neuroscience cognitive science and philosophy The current Research Topic evolved over the desire to acknowledge the relatively recent loss of three giants in the field Drs Shlomo Bentin Truett Allison and Andy Calder We dedicate this Research Topic to them and their pioneering studies

Novel Technologies in the Diagnosis and Management of Sleep-disordered Breathing Henri Korkalainen, Ding Zou, 2024-03-13 Sleep disordered breathing ranging from habitual snoring to severe obstructive sleep apnea is highly prevalent and represents a growing global healthcare burden Besides disrupting sleep sleep disordered breathing leads to detrimental outcomes such as excessive daytime sleepiness neurocognitive impairment and increased cardiometabolic morbidities The gold standard diagnostic procedures e g in lab polysomnography are cumbersome and standard parameters derived from sleep studies often yield poor long term prognostic value Hence there is a need for innovative diagnostic technologies and novel sleep metrics to enable simple diagnosis and tailored disease management

Neurofeedback in ADHD Hartmut Heinrich, Ute Strehl, Martijn Arns, Aribert Rothenberger, Tomas Ros, 2016-01-28 EEG based neurofeedback is used as a treatment approach in attention deficit hyperactivity disorder ADHD a clinically and pathophysiologically heterogeneous child psychiatric disorder There is

increasing evidence for specific effects of neurofeedback when applying standard protocols slow cortical potentials theta beta sensorimotor rhythm Knowledge about underlying mechanisms and moderating variables is increasing Nevertheless further well controlled and conducted trials are needed to answer open questions concerning optimisation and individualisation of neurofeedback Further improvements may develop with new methods and technical developments e g tomographic neurofeedback and new concepts integrated ADHD treatment This Frontiers Research Topic comprising 14 articles intends to answer the following questions concerning neurofeedback in ADHD How efficacious is neurofeedback What is the rationale of applying a certain neurofeedback protocol in ADHD What are central mechanisms and which moderating variables may affect training and treatment outcome How to optimise treatment What are new developments and which benefits may be expected Aspects of learning theory are also stressed dissociating neurofeedback as a treatment and neurofeedback as entertainment In the Editorial this crucial aspect is compared to the way you read and study a scientific book versus reading a thriller for leisure In this respect Enjoy this Research Topic study and apply it in practice unless you read it for entertainment purposes

A Brief Look at David Holdzkom,Brian Sumner,Brad McMillen,2010 In the context of standardized testing the standard error of measurement SEM is a measure of the factors other than the student s actual knowledge of the tested material that may affect the student s test score Such factors may include distractions in the testing environment fatigue hunger or even luck This means that a student s observed score may be below or above their true level of knowledge On North Carolina s End of Grade EOG and End of Course EOC tests the SEM is usually estimated at 3 4 scale points Thus the SEM is often factored into decisions on promotion retention and graduation students scoring within one SEM of Level III proficient are often advanced to the next level However the SEM is not factored into school accountability metrics and students scoring below Level III on an EOG or EOC test are not counted as proficient in the school s publicly reported testing
