**Methods and Structural Optimization — Procedures and Applications** Hans A. Eschenauer, Georg Thierauf, 2012-12-06

In recent years the Finite Element Methods FEM were more and more employed in development and design departments as very fast working tools in order to determine stresses deformations eigenfrequencies etc for all kinds of constructions under complex loading conditions Meanwhile very effective software systems have been developed by various research teams although some mathematical problems e g convergence have not been solved satisfactorily yet In order to make further advances and to find a common language between mathematicians and mechanics the Society for Applied Mathematics and Mechanics GAMM agreed on the foundation of a special Committee Discretization Methods in Solid Mechanics focussing on the following problems Structuring of various methods displacement functions hybrid and mixed approaches etc Survey of approach functions Lagrange Hermite polynomials Spline functions Description of singularities Convergence and stability Practical and theoretical optimality to all mentioned issues single and interacting One of the basic aims of the GAMM Committee is the interdisciplinary cooperation between mechanics mathematicians and users which shall be intensified Thus on September 22 1985 the committee decided to hold a seminar on Structural Optimization in order to allow an exchange of experiences and thoughts between the experts of finite element methods and those of structural optimization A GAMM seminar entitled Discretization Methods and Structural Optimization Procedures and Applications was held on October 5 7 1988 at the University of Siegen **Automotive Transmissions** Giesbert Lechner, Harald

### **Optimizing Hyperparameters for Machine Learning Algorithms in Production** Jonathan Krauß, 2022-04-13

Machine learning ML offers the potential to train data based models and therefore to extract knowledge from data Due to an increase in networking and digitalization data and consequently the application of ML are growing in production The creation of ML models includes several tasks that need to be conducted within data integration data preparation modeling and deployment One key design decision in this context is the selection of the hyperparameters of an ML algorithm regardless of whether this task is conducted manually by a data scientist or automatically by an AutoML system Therefore data scientists and AutoML systems rely on hyperparameter optimization HPO techniques algorithms that automatically identify good hyperparameters for ML algorithms The selection of the HPO technique is of great relevance since it can improve the final performance of an ML model by up to 62 % and reduce its errors by up to 95 % compared to computing with default values As the selection of the HPO technique depends on different domain specific influences it becomes more

and more popular to use decision support systems to facilitate this selection. Since no approach exists which covers the requirements from the production domain, the main research question of this thesis was: Can a decision support system be developed that supports in the selecting of HPO techniques in the production domain?
