## Direction & Strength of Linear Relationship

$r = 0.9$   
Correlation = 0.81

- Interpretation:
- Positive direction
  - Strong linear relationship

- Correlation describes direction and strength of linear relationships.
- Two variables can be related **nonlinearly** (curved)
- Examples:
  - Quadratic relationships
  - Exponential relationships
- Different functions are used for quadratic and exponential relationships.

Spencer,Sandra Vavra,2015-01-01 The Common Core Standards have recently been adopted in most states across the nation and teachers are in the process of getting to the core of these standards Teaching to standards is not a new concept teachers have adapted to new standards every few years for quite some time And teachers are adaptable as can be seen in this book We are writing this book to demonstrate how teachers use research based strategies to meet Common Core Standards while still focusing on students Our goal is to help teachers visualize students in action as other teachers describe the implementation of research based strategies in their own

classrooms show student work samples and provide reflections of student success in achieving the standards. Many Common Core Standards books focus on the standards but our approach focuses on strategies that engage the students in the classroom showing how different teachers at varying grade levels have used the strategies to meet the standards. With this focus we believe that teachers gain a new and positive perspective on approaching the new standards and see the flexibility of strategies for meeting standards across subject areas. We have examined research on the strategies with the purpose of giving teachers a brief description of why these strategies work before giving actual examples from classrooms. We also work closely with teachers in the public schools and have our finger on the pulse of what is happening in the public schools, one of the current stressors being unpacking the Common Core Standards. This book actually focuses on practice. We begin by laying out a rationale in our first chapter, The Core Values of Education. Then each chapter focuses on a strategy including 1) a brief description about the research supporting each strategy and 2) several examples from different grade levels which include a description of how the strategy was used, student work samples, and a reflection on the use of the strategy. The research descriptions are fairly short because while we believe professional educators aka teachers in this case should know the research that supports practice, we know they are not typically interested in long diatribes about the research.

**Topics and Trends in Current Statistics Education Research** Gail Burrill, Dani Ben-Zvi, 2018-12-29. This book focuses on international research in statistics education providing a solid understanding of the challenges in learning statistics. It presents the teaching and learning of statistics in various contexts including designed settings for young children, students in formal schooling, tertiary level students, and teacher professional development. The book describes research on what to teach and platforms for delivering content, curriculum strategies on how to teach for deep understanding, and includes several chapters on developing conceptual understanding, pedagogy, and technology, teacher knowledge and beliefs, and the challenges teachers and students face when they solve statistical problems, reasoning and thinking. This new research in the field offers critical insights for college instructors, classroom teachers, curriculum designers, researchers in mathematics and statistics education, as well as policy makers and newcomers to the field of statistics education. Statistics has become one of the key areas of study in the modern world of information and big data. The dramatic increase in demand for learning statistics in all disciplines is accompanied by tremendous growth in research in statistics education. Increasingly, countries are teaching more quantitative reasoning and statistics at lower and lower grade levels within mathematics, science, and across many content areas. Research has revealed the many challenges in helping learners develop statistical literacy, reasoning, and thinking, and new curricula and technology tools show promise in facilitating the achievement of these desired outcomes.

different levels of formalisation to meet the wide variety of students previous knowledge abilities and learning types The remaining chapters deal with exploratory data analysis modelling information by probabilities exploring and modelling association and with sampling and inference Throughout the book a modelling view of the concepts guides the presentation In each chapter the development of a cluster of fundamental ideas is centred around a statistical study or a real world problem that leads to statistical questions requiring data in order to be answered The concepts developed are designed to lead to meaningful solutions rather than remain abstract entities For each cluster of ideas the authors review the relevant research on misconceptions and synthesise the results of research in order to support teaching of statistics and probability in high school What makes this book unique is its rich source of worked through tasks and its focus on the interrelations between teaching and empirical research on understanding statistics and probability **Common Core Mathematics**
